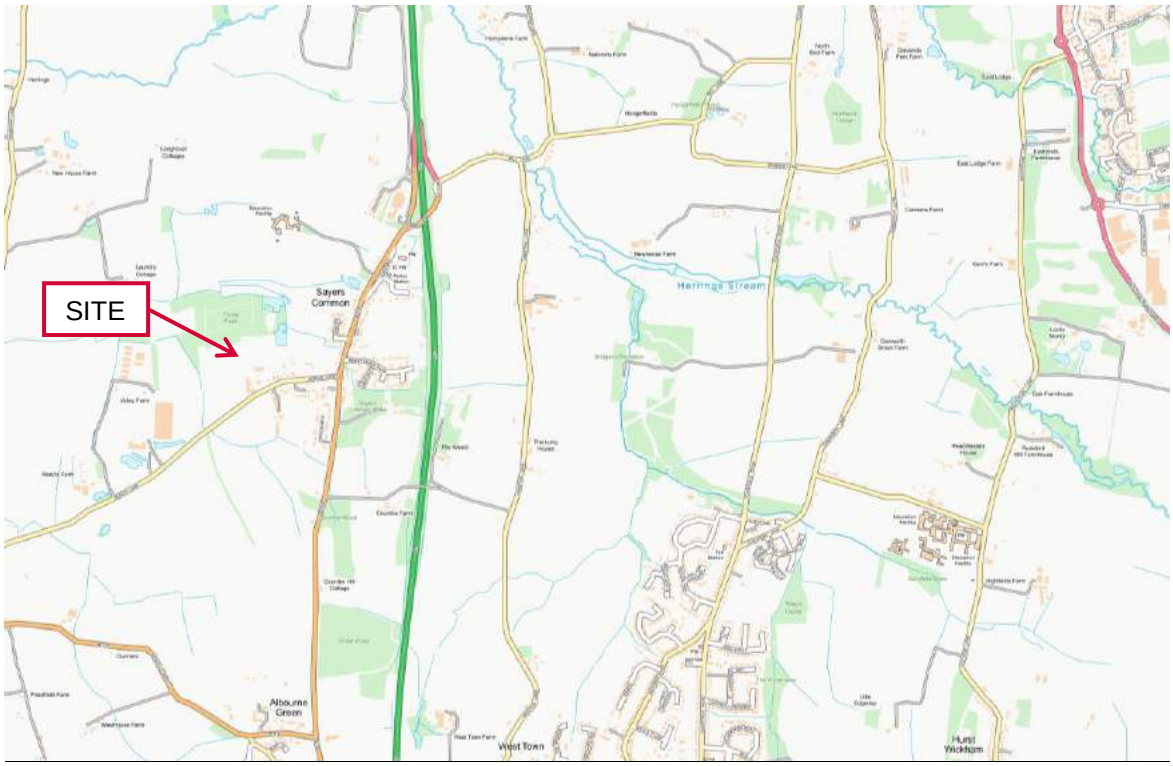
1. INTRODUCTION

1.1 Iceni Projects Ltd has been appointed by Reside Developments Ltd to provide transportation advice in regard to their development proposals at their site at a former brick works in Reeds Lane, Sayers Common.

1.2 The site is shown in **Plate 1** below, with a full site location plan attached at **Appendix A1** at the end of this report.

Plate 1 – Site Location



1.3 The proposed scheme comprises of the development of approximately 29(no.) dwellings and a doctors' surgery, including a number of affordable dwellings, on the former brickworks site, which has been returned to its undeveloped form over the past decades.

1.4 This Transport Statement (TS) is informed by the requirements of West Sussex County Council (WSCC) as the highways authority, and Mid Sussex District Council (MSDC) as the local highway and planning authorities.

1.5 The methodology used in the preparation of this TS follows the document '*Travel Plans, Transport Assessments and Statements in decision taking*' (March 2014), which forms part of the National Planning Practice Guidance.

1.6 This Transport Statement is set out as follows:

- **Section 2** provides an assessment of the existing site conditions, incorporating a description of the existing site use, local highway network, public transport accessibility, cycling and walking facilities and a highway safety assessment;
- **Section 3** provides a review of national, regional and local development and transport planning policy relevant to the location, scale and type of proposal;
- **Section 4** provides a description of the development proposals, including access, parking, servicing and refuse collection arrangements;
- **Section 5** considers the trip generation associated with the development site; and
- **Section 6** sets out a summary and draws conclusions.

1.7 The results of this assessment demonstrate that the development proposal is acceptable from a transport perspective.

2. THE SITE AND SURROUNDINGS

Site Description

2.1 The application site is located off Reeds Lane, towards the north-western side of Sayers Common. The characteristics of the surrounding area are predominantly residential, with residential units immediately to the south of the site, and the village located to the east of the site.

2.2 Sayers Common is a village in Sussex, located in the South-East of England. The village is located approximately one mile to the northwest of the village of Hurstpierpoint, two miles to the west of the town of Burgess Hill, eleven miles to the south of Crawley, and eight miles to the north of Brighton.

2.3 The site is bound to the north, west and east by undeveloped land parcels, including Furze Field woods to the north of the site. The south of the site is bound by residential dwellings fronting onto Reeds Lane. The site includes one of these units, as well as two existing paths which links the site to the public highway.

2.4 The site is currently an undeveloped land parcel, having been returned to such state after being used as a brick clay mining site and a brickworks in the past.

2.5 The application site in context with its surroundings is shown below at **Plate 2**.

Plate 2 – The Site

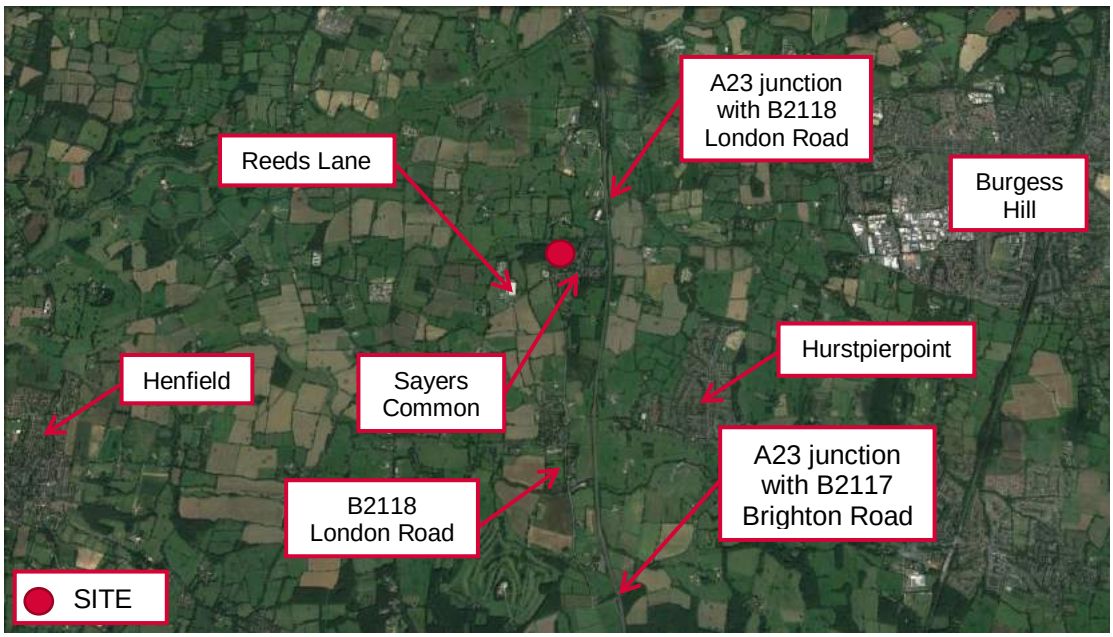
Surrounding Highway Network

2.6 Reeds Lane terminates to the west into B2118 London Road, running through the centre of Sayers Common. B2118 London Road runs parallel to the A23, by-passing local villages, and linking the B2118 London Road to Brighton to the south and to Crawley to the north, where it becomes the M23 and then continuing onto the M25.

2.7 The roads surrounding the site are illustrated in **Plate 3** overleaf.

2.8 The site is accessible via two existing vehicular crossovers, as well as a pedestrian path from Reeds Lane. Reeds Lane is accessible from the arterial network via a grade separated junction on the A23.

Plate 3: Local Highway Network



2.9 The site access enjoys a good level of visibility along the edge of the kerb from the site access. On street parking is not restricted on this section of Reeds Lane.

2017 Automatic Traffic Count Surveys: Volume

2.10 ATC surveys were undertaken on Reeds Lane to record directional classified vehicle flows in hourly intervals for a period of one week (Posted Speed Limit – 30mph).

2.11 Based on the automatic traffic count data, the network peak hours were generally identified as being:

- AM Peak – 0800-0900
- PM Peak – 1700-1800

2.12 **Tables 2.1 to 2.3** below summarise the results of these surveys.

Table 2.1 Traffic Surveys - ATC Traffic Flow Data (Two-Way) – AM Peak Hour

Road	5-day average	7-day average
Reeds Lane	131 eastbound / 201 westbound / 332 total	107 eastbound / 156 westbound / 263 total

Table 2.2 Traffic Surveys - ATC Traffic Flow Data (Two-Way) – PM Peak Hour

Road	5-day average	7-day average
Reeds Lane	204 eastbound / 110 westbound / 314 total	166 eastbound / 95 westbound / 261 total

Table 2.3 Traffic Surveys - ATC Traffic Flow Data (Two-Way) – Daily

Road	5-day average	7-day average
Reeds Lane	1,522 eastbound / 1,412 westbound / 2,934 in total	1,332 eastbound / 1,232 westbound / 2,564 in total

2.13 It can be seen from the results summarised in **Tables 2.1 and 2.2** that the traffic on Reeds Lane during the weekday AM and PM peak hours are quite low, with a total two-way flows of 332 and 314 vehicles respectively. It can also be noted that 7-day averages are lower than 5-day averages, noting that traffic volumes are lower during weekends.

2017 Automatic Traffic Count Surveys: Speed

2.14 The ATCs recorded the speed of vehicles as well as volume of traffic. The results are included in **Appendix A3** and the average and 85th percentile speeds are summarised in **Table 2.4** below.

Table 2.4 Traffic Surveys - ATC Traffic Flow Data (Two-Way) – Vehicle Speeds

Road	Average	85th Percentile
Reeds Lane	28mph eastbound / 25.2mph westbound	34mph eastbound / 31.3mph westbound

Note: No wet weather correction applied

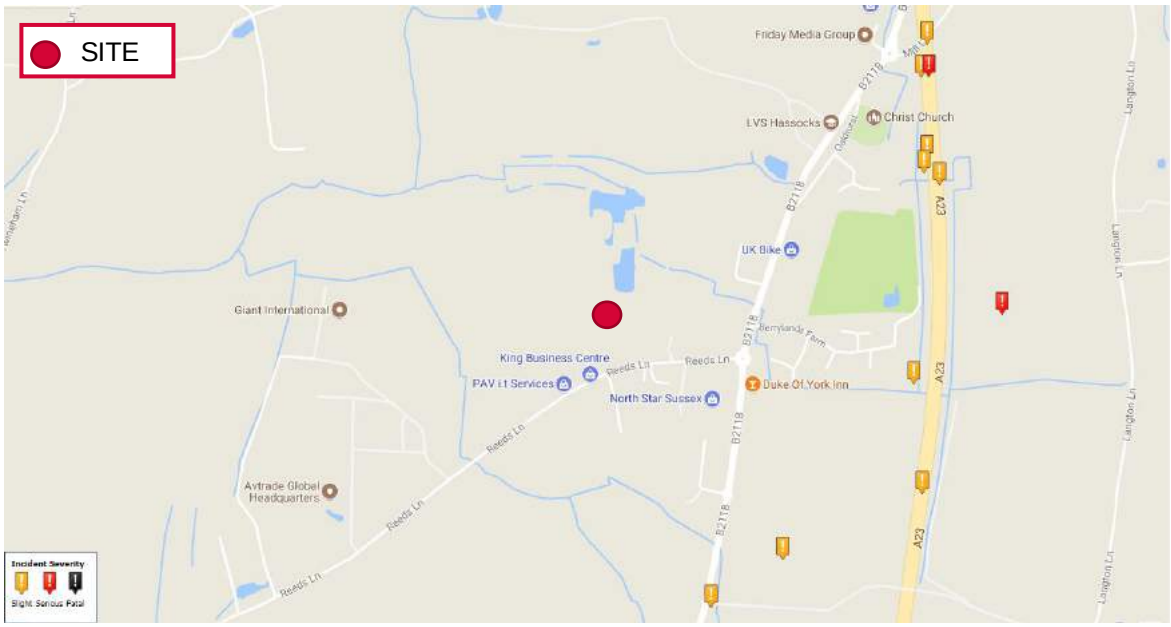
2.15 The above tables demonstrate that the average and 85th percentile speeds are slightly above the posted speed limit.

Highway Safety Assessment

2.16 In order to assess the safety of the existing highway network surrounding the site, Personal Injury Collision (PIC) data within 200m of the site have been reviewed on the CrashMap portal (http://www.crashmap.co.uk/Search) for the most recent five year period available (2012 to 2016). The area covered by the data, and full details of the collisions, are shown in **Plate 4** below.

2.17 Over the five years surveyed, only one PIC occurred within 500m of the site. The only recorded collision happened in 2013 whereby a slight injury was recorded, involving a pedal cycle and a car, at an agricultural site access on B2118 London Road. This was not related to traffic within the village.

Plate 4: Map of Collisions as set out in the CrashMap portal



Source: www.crashmap.co.uk/search

2.18 It is therefore evident that there are not any underlying highway safety issues that would be exacerbated by the proposed development. Furthermore, it is considered that the number of collisions is very low for the five year period under consideration.

Public Transport Assessment

Bus Services

2.19 The provision of bus based public transport in the area has been assessed in terms of access to routes and frequencies of services, in addition to the quality of the bus infrastructure within the area.

Table 2.5 Bus Services

#	*Route*	*Monday - Friday service*		*Saturday service*		*Sundays & PH service*
		First Bus	*Last Bus*	*First Bus*	*Last Bus*	
100	Burgess Hill - Henfield - Steyning - Pulborough - Billingshurst - Horsham	06:55	18:20	07:55	18:20	No service
		1 service per hour		1 service per hour		
273	Crawley - Pease Pottage - Bolney - Hurstpierpoint - Hassocks - Brighton	05:19	18:06	08:02	17:59	No service
		1 service every 2 hrs		1 service every 2 hrs		
331		08:00	n/a	No service		

	Sayers Common - Hurstpierpoint - Hassocks – Downlands School	1 service per day		No service

Notes: Information taken from the supplier website. Correct at the time of writing report.

2.20 There are two bus stops located within the vicinity of the site. The closest bus stops to the site are located on B2118 London Road approximately 430m (6 minute walk) away from the site access, serving bus routes 100, 273 and 331. The bus stops are demarked by typical bus flagpoles.

2.21 **Table 2.5** demonstrates the services that are available from the bus stops detailed above. Further information is attached at **Appendix A3**. In summary, there are a number of bus services operating throughout the day, Mondays to Saturdays, within the vicinity of the site.

Rail Services

2.22 The nearest train stations are Burgess Hill and Wivelsfield Train Stations, located approximately 6km east of the site. Both stations are visited by seven trains per hour during peak hours, running between Bedford and Brighton via London and Gatwick Airport on Thameslink, Southern and Gatwick Express train services.

2.23 It is therefore considered that the site has good levels of access to a wide range of rail services providing frequent connections both to London and onward travel on a national scale.

2.24 Route maps and timetables discussed above are included as **Appendix A4** of this document.

Walking and Cycling Assessment

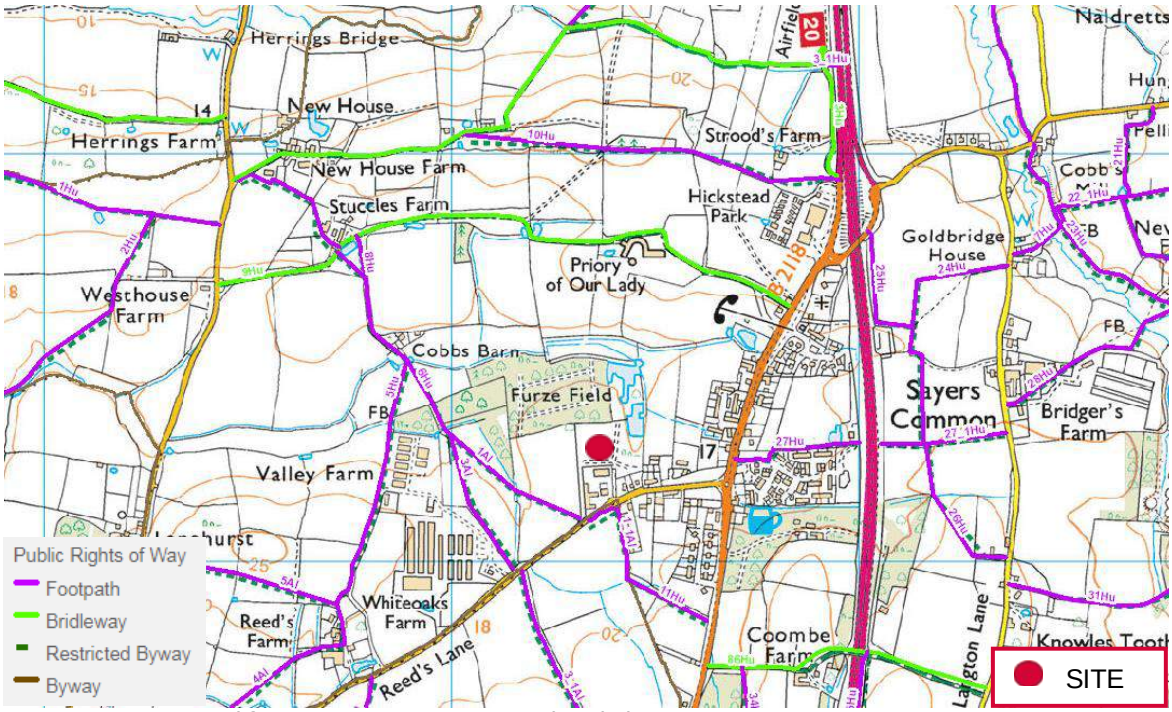
Walking

2.25 The area surrounding the site has good pedestrian links with an established network of footways, in addition to several Public Rights of Way, which are located within the vicinity of the site and provide good access to the surrounding area, as demonstrated by **Plate 5** overleaf.

2.26 The site also enjoys the availability of a footway along the opposite side of the road of Reeds Lane. This footway is approximately 1.8m wide and links the site to centre of Sayers Common.

2.27 The site also enjoys access to a variety of local stores and services on B2118 London Road, including a village hall community shop, convenience store, dental laboratory a car dealership garage and a public house, all located within a 1km walk of the site.

Plate 5: Public Rights of Way



Note: Image extracted from www.westsussex.gov.uk website

Cycling

2.28 A National Cycle Route is available within the vicinity of the site. Route 20 runs approximately 200m to the east of the site via the B2118 London Road, running between Brighton and London. In addition, a number of the local roads are suitable for use by cyclists.

2.29 It is therefore considered that there is potential to cycle to and from the site, and within the surrounding area. Cycling has the potential to substitute for short car trips, especially those less than 5km. Thus, amenities and services including bus stops, rail stations, educational facilities, religious centres, restaurants, supermarkets and numerous retail and leisure opportunities are located within an acceptable cycling distance of the site and there is ample opportunity for users of the site to utilise this mode of transport.

2.30 It should also be noted that Burgess Hill is within 5km of the site meaning that cycling to the site may be attractive to some residents living at the site working in or commuting from Burgess Hill.

Summary

2.31 The above shows that the site is located in a sustainable location with acceptable levels of access to existing pedestrian and cycling facilities, in addition to the public transport services available, which will encourage use of these modes.

Travel Patterns of Local Residents

2.32 The 2011 Census was queried to review the existing travel to work patterns of local residents, resident within the surrounding areas. Within the local ward (E05007692: Hurstpierpoint and Downs), it was noted that almost half of the respondents stating that they use the private car to commute to work. This is very much in line with the regional and national averages, as shown in **Table 2.6** below.

Table 2.6 Method of Travel to Work of Local Residents

Method of Travel to Work (2011 Census)	Hurstpierpoint & Downs		West Sussex	England
	Number	*Percentage*	*Percentage*	*Percentage*
Work mainly at or from home	473	8%	5%	3%
Underground, metro, light rail, tram	5	0%	0%	3%
Train	369	7%	9%	3%
Bus, minibus or coach	63	1%	1%	5%
Taxi	7	0%	0%	0%
Motorcycle, scooter or moped	27	0%	0%	1%
Driving a car or van	2,465	44%	43%	37%
Passenger in a car or van	174	3%	3%	3%
Bicycle	70	1%	1%	2%
On foot	277	5%	8%	7%
Other method of travel to work	27	0%	0%	0%
Not in employment	1,658	30%	28%	35%
Total residents	5,615	100%	100%	100%

2.33 The 2011 Census data was also queried regarding the car availability levels within the area.

Table 2.7 Car availability of Local Residents

Car Availability (2011 Census)	Hurstpierpoint & Downs		West Sussex	England
	Number	*Percentage*	*Percentage*	*Percentage*
No cars or vans in household	330	10%	14%	26%
1 car or van in household	1,328	41%	42%	42%
2 cars or vans in household	1,205	37%	33%	25%
3 cars or vans in household	262	8%	8%	5%
4 or more cars or vans in household	126	4%	3%	2%
Total households	3,251	100%	100%	100%

2.34 **Table 2.7** shows that local residents had a similar car ownership levels as to regional and national averages, as well equating to an average vehicle ownership figure of 1.55 cars per dwelling.

3. TRANSPORTATION POLICY

3.1 The proposed development is subject to both national and local planning policy guidance, with respect to transportation and its impact upon the local environment and surrounding infrastructure. The relevant policies are detailed within this following section.

National Planning Policy

National Planning Policy Framework – March 2012

3.2 The National Planning Policy Framework (NPPF), which was adopted in March 2012, sets out the Government's planning policies for England and how these are expected to be applied. It provides a framework within which local people and their accountable councils can produce their own distinctive local and neighbourhood plans, which reflect the needs and priorities of their communities. As a result of the NPPF being adopted, all Planning Policy Guidance and Planning Policy Statements have been superseded, including PPG13 (Transport), which was formerly used as a basis for national transport policy. As such, any detailed policy guidance previously provided within PPG13 will no longer act as the default policy where no policy has been set by the local authority. All detailed transport polies will now be found within Unitary Development Plan and Local Development Framework documents adopted by each local authority.

3.3 While no longer policy, there are two key aspects within PPG13 which are still of relevance when determining a sites levels of sustainable travel access. *Paragraph 74* states the following:

> *"Walking is the most important mode of travel at the local level and offers the greatest potential to replace short car trips, particularly under two kilometres. Walking also forms an often forgotten part of all longer journeys by public transport and car."*

3.4 *Paragraph 77* goes on to state that:

> *"Cycling also has potential to substitute for short car trips, especially those under five kilometres, and to form part of a longer journey by public transport".*

3.5 It is considered that the above walking and cycling distances referred to in PPG13 remain valid and should not be overlooked when determining the walking and cycling accessibility of development sites.

3.6 Notwithstanding, as stated above, NPPF has superseded PPG13, and the relevant sections of the NPPF are detailed below.

3.7 With regard to transport policy, the NPPF states at *Paragraph 29* that:

"Transport policies have an important role to play in facilitating sustainable development but also in contributing to wider sustainability and health objectives" and that "The transport systems needs to be balanced in favour of sustainable transport modes, giving people a real choice about how they travel".

3.8 *Paragraph 32* goes on to state that:

"All developments that generate significant amounts of movement should be supported by a Transport Statement or Transport Assessment" and that "Plans and decisions should take account of whether

- *The opportunities for sustainable transport modes have taken up depending on the nature and location of the site, to reduce the need for major transport infrastructure;*
- *Safe and suitable access to the site can be achieved for all people; and*
- *Improvements can be undertaken within the transport network that cost effectively limit the significant impacts of the development. Development should only be prevented or refused on transport grounds where the residual cumulative impacts of development are severe".*

3.9 As described in **Section 2** of this report, the site is located within an area that provides good opportunities for all future uses of the site to walk, cycle and use public transport.

National Planning Practice Guidance (NPPG) – March 2014

3.10 Information contained as part of the NPPG provides advice for travel plans, transport assessments and statements in decision taking.

"Travel Plans, Transport Assessments and Statements are all ways of assessing and mitigating the negative transport impacts of the development in order to promote sustainable development. They are required for all developments which generate significant amounts of movement".

3.11 This TS follows the advice provided within the NPPG and provides the information which should be included as part of an assessment.

West Sussex County Council – Regional Policy

Local Transport Plan 2011-2026

3.12 WSCC's Local Transport Plan (LTP3), known as the *West Sussex Transport Plan*, adopted in February 2011. It is the main statutory document focused on transport developing strategic policy of managing growth in the County.

3.13 The LTP includes a number of policies that set out WSCC's approach to transport, which have been reviewed during the preparation of this report, in addition to its Parking Strategy document. The policies in the Core Strategy that are pertinent to the proposed development are listed below.

3.14 Strategic Policy 1 aims at promoting economic growth network:

Strategic Policy 1 - Promoting Economic Growth

"improve quality of life for the people of West Sussex by helping to provide:

A high quality transport network that promotes a competitive and prosperous economy in all parts of the County"

3.15 Strategic Policy 2 encourages the development of sustainable growth through:

Strategic Policy 2 - Tackling Climate Change

"improve quality of life for the people of West Sussex by helping to provide:

A resilient transport network that complements the built and natural environment whilst reducing carbon emissions over time"

3.16 Strategic Policies 3 and 4 aim to provide an accessible transport network, providing travel opportunities for everyone by:

Strategic Policy 3 - Improving Accessibility

"improve quality of life for the people of West Sussex by helping to provide:

Access to services, employment and housing."

Strategic Policy 4 - Improving Safety, Health & Security

"improve quality of life for the people of West Sussex by helping to provide:

A transport network that feels, and is, safer and healthier to use."

Parking in New Residential Developments (September 2010)

3.17 The latest edition of the WSCC Parking Standards were published in September 2010. Within this document, the design consultants are referred to a spreadsheet that is available on the council webpage, calculating parking demand.

3.18 This document dictates a parking guideline requirements, which aims at providing enough parking within each development to avoid overspill into on-street parking.

3.19 This document also requires new residential units to provide cycle parking spaces with each dwelling:

Strategic Policy 4 – Cycle Parking Standards

Type	Size	Cycle Provision (per unit)
Houses	Up to 4 rooms (1 & 2 bed)	1 space
Houses	5+ rooms (3+ bed)	2 spaces
Flats	Up to 3 rooms (1 & 2 bed)	0.5 space (if communal storage otherwise same as 1 & 2 bed house)
Flats	4+ rooms (3+ bed)	1 space

3.20 Following the above, each of the two bedroom houses will require one cycle parking space, whereas larger units, having three or more bedrooms will require two cycle parking spaces for each dwelling.

3.21 From the above spreadsheet calculation it was estimated that the development will require a total of 70(no.) allocated spaces, as well as another nine unallocated spaces, six for visitors, and three for residents. This is slightly less than the proposed 84(no.) spaces (shared between 16(no.) garage spaces, 58(no.) allocated spaces and ten visitor spaces).

3.22 Given the scale of this development, and the access proposals as detailed within **Section 4**, it is considered that the development accords with the above policy. Details of the proposed off-site highway arrangements are detailed in **Section 4**.

Mid Sussex District Council Policy

Adopted Policy - Development and Infrastructure SPG

3.23 Mid Sussex District Council's *Development and Infrastructure* (SPG) was formally adopted by the Council in 2006, and forms the main guidelines for Residential Development. Those policies which are pertinent to this proposal are detailed below.

3.24 Annex 4 of the SPG note the parking standards that apply within the District:

Parking Standards for Residential Dwellings

DWELLING TYPE (FLATS AND HOUSES)	Maximum standard
1 bed dwellings	1 car space* per dwelling and 1 cycle space per dwelling**
2 and 3 bed dwellings	2 spaces per dwelling and 2 cycle spaces per dwelling**
4 bed dwellings	3 spaces per dwelling and 2 cycle spaces per dwelling**
5 or more bed dwellings	Car and cycle parking to be assessed individually.

* A residential parking space is defined as a garage, spaces on driveway within the curtilage of property or designated parking outside the curtilage of the property such as parking courts and lay bys.

** No cycle parking is required if a garage is provide and the garage is of sufficient size. On larger developments (8 dwellings or more) cycle parking for visitors should be provided at a ratio of 1 cycle space per 8 dwellings.

3.25 This policy requires that two and three bedroom units are provided a maximum of two car parking spaces per dwelling, whereas four bedroom dwellings are allocated a maximum of three parking spaces.

3.26 The policy also requires two, three and four bedroom units requires developers to provide two cycle parking spaces per dwelling, plus an additional visitor space for every eight dwellings (equating to four spaces in this case), which can be included within garages.

3.27 Additionally, **Section 4** includes details on the proposed site access into the site and the parking arrangements.

Emerging Policy – District Plan

3.28 The emerging District Plan is scheduled to be adopted in spring 2018 as the main planning guideline document which will be used at reviewing planning applications once this is fully adopted. It is currently undergoing its Main Modifications Consultation stage, which will be completed in November the 13th of November 2017. This document includes amendments to existing transport policy.

3.29 Within *Policy DP19* of this document, the policy states that:

> *"…decisions on development proposals will take account of whether:*
>
> - *Appropriate opportunities to facilitate and promote the increased use of alternative means of transport to the private car, such as the provision of, and access to, safe and convenient routes for walking, cycling and public transport, including suitable facilities for secure and safe cycle parking, have been fully explored and taken up;*
> - *The scheme provides adequate car parking for the proposed development taking into account the accessibility of the development, the type, mix and use of the development and the availability and opportunities for public transport; and with the relevant Neighbourhood Plan where applicable;*
> - *The scheme avoids severe additional traffic congestion, individually or cumulatively, taking account of any proposed mitigation;"*

Note: Extracts not relevant to the paragraph not included within quote.

3.30 The application scheme accords with the relevant points of Policy DP19 of the emerging District Plan.

Local Planning Applications

3.31 An outline planning application for the development of 120 residential units, community facility, office space, care home and retail units (12/04347/OUT and 12/01240/OUT) were recently refused on a neighbouring site (land at Kingsland Laines, Reeds Lane, Sayers Common) to the east of the application site. Although these applications were refused, with the latter also dismissed at appeal, it is pertinent to note that within the appeal decision the inspector stated that:

> *"The site is in a sustainable location for housing, with good access to a range of local facilities and services. Subject to a planning obligation to secure an agreed package of highway works and other transport related measures and financial contributions, the Council's objection in relation to reason for refusal 3 is addressed."*

3.32 Subsequently an outline planning application for the approval of access details for 40 houses, extra care facility with access from London Road/B2118 (15/1467/OUT) was approved for the site. Within the committee report for the application the Inspectors comments, along with those made by the Secretary of State, was referred to in regard to the sustainability of the site as follows;

"In considering the sustainability of the site for 120 units the appeal Inspector made the following conclusions:

'All in all, it seems to me that residents of Sayers Common have access to a reasonable range of services and that it would be appropriate to permit further development here, both in terms of there being a range of services and facilities to support an increased population, and in terms of the potential that the increased population itself would have in helping maintain the viability of those services and facilities.

As recognised by the Highway Authority, whilst the elements included in the planning obligation do not, of themselves, make the site sustainable in transport terms, they are, together with the existing public transport, walking and cycling provision, sufficient to ensure that access to those services and facilities required by people on an everyday basis, by sustainable modes, is a realistic prospect. In principle therefore, and notwithstanding that the development proposed exceeds the upper figure referred to in the RIBP, I am satisfied that future occupiers would not be heavily reliant on the private car and that the site can be considered as a reasonably accessible location for the residential development proposed. I find no material conflict with policies G2 and T4 of the Local Plan, or the thrust of the National Planning Policy Framework in this regard which, together, seek to direct development to sustainable locations in order to reduce reliance on the private car.'

This Council did not object to the appeal scheme on the grounds of sustainability. The SoS made the following conclusions on this matter:

'He has carefully considered the Inspector's assessment of accessibility/sustainability at IR12.30-12.42, and, for the reasons contained therein, he agrees that the elements included in the planning obligation, together with existing public transport, walking and cycling provision, would be sufficient for there to be a reasonable prospect of providing access by sustainable modes to those services and facilities required by people on an everyday basis.' "

3.33 Given the location of the approved scheme at Kingsland Laines, Reeds Lane, Sayers Common in proximity to the application site and the similar scale of development proposed, it can be agreed that the site is sustainable within the context of relevant policy, to the benefit of prospective residents.

Summary

3.34 National and local policies highlight the need to reduce the number of trips by car, particularly single occupancy vehicle trips. Based on the foregoing, it is clear that the site is located within a sustainable location and that the proposed development accords well with national and local policies.

4. PROPOSED DEVELOPMENT

4.1 The proposed development includes the development of the former brickworks site and brick pit into a residential area comprising of 29(no.) residential dwellings and a doctors' surgery, as well as ancillary landscaping, garages and parking spaces.

4.2 The proposed development will expand the existing site access into an existing property named Lyndon, located on Reeds Lane.

4.3 The proposed site layout is attached as **Appendix A5**.

Site Access

4.4 The site will take access from an existing crossover, which will be extended into a bell mouth junction onto Reeds Lane, having kerb radii of 6m on either side. The proposed site access is 4.8m wide, leading to the proposed dwellings on site to the north of the residences fronting Reeds Lane.

Visibility Splays

4.5 The proposed site access enjoys good visibility along both sides of Reeds Lane, exceeding the 43m along the street, from a position 2.4m behind the give way line, as required by Manual for Streets, Table 7.1, for the existing posted speed limit on Reeds Lane of 30mph. Visibility is also available when based upon the measured 85th percentile speeds of 34mph eastbound and 31mph westbound. These are shown in **Appendix A6**.

4.6 The two priority junctions within the site have been reviewed and provide adequate visibility of 25m from 2.4m behind the give way line. These are proposed for a design speed 20mph.

4.7 It is considered that the proposed highway arrangement for the development is safe and efficient for the proposed land-use changes.

Unit Mix & Parking Provision

4.8 The proposed site will consist of a doctors' surgery and 29(no.) residential units based on the following unit mix:

- 4(no.) affordable two-bedroom houses;
- 4(no.) private two-bedroom houses;
- 5(no.) affordable three-bedroom houses;
- 12(no.) private three-bedroom houses; and

- 4(no.) private four-bedroom houses.

4.9 The dwellings each have assigned car parking spaces, which varies between two and four vehicle spaces allocated to each dwelling, as well as cycle parking. In total 74(no.) allocated vehicular parking spaces are being proposed in the development (16 garage spaces and 58 car parking spaces). Another ten spaces are allocated for visitors, as well as another six spaces for the doctors' surgery. Cycle spaces are allocated within the unit garages and in cycle stores (sheds) within the respective dwellings.

Vehicular Parking

4.10 The WSCC parking standards are discussed within the *West Sussex County Council Guidance for Parking in New Residential Developments (September 2010)* document. Using the Parking Demand Calculator tool provided in this document, the parking requirements are shown in **Table 4.1** below.

Table 4.1 WSCC Parking Standards – New Residential developments

Parking type	*Recommended provision*
Allocated vehicle parking	*70 spaces*
Unallocated resident vehicle parking	*3 spaces*
Unallocated visitor vehicle parking	*6 spaces*
Allocated cycle parking	*50 spaces*

Note: Calculation based within parking_demand_calculator.xlsm spreadsheet

4.11 According to the WSCC parking standards the site would therefore require 79(no.) car parking spaces.

4.12 The WSCC guidelines do not require any allocated blue-badge parking spaces allocated for disabled users. However, a safe access is required to be provided within the development.

Cycle Parking

4.13 Cycle parking requirements according to WSCC policy are also included within **Table 4.1** above. These standards require the provision of 50(no.) long term spaces, which are to be provided in garages or cycle stores within each respective dwelling.

Table 4.2 MSDC Parking Standards – New Residential developments

Parking type	*Recommended provision*
Allocated vehicle parking	*62 spaces*
Allocated cycle parking	*58 spaces*
Unallocated visitor cycle parking	*4 spaces*

4.14 The MSDC requires a total of 62(no.) car parking spaces as shows within **Table 4.2** above. This is split as two spaces each for two and three-bedroom units and three spaces for the four-bed dwellings. This include the parking provision within the respective garages.

4.15 In comparison to the WSCC policy above, the MSDC policy requires two cycle parking spaces for every dwellings as well as an unallocated visitor parking space for every eight dwellings, equating to 58(no.) allocated cycle parking spaces and 4(no.) unallocated spaces.

4.16 The cycle spaces are split between the 30(no.) cycle spaces within sheds, 28(no.) garages, and four cycle spaces on two 'Sheffield type' cycle stands. These are therefore in compliance with the requested parking standards provided within the WSCC and MSDC Parking Standards.

4.17 It is considered that whilst the development proposals slightly exceeds the WSCC and MSDC policy, the car parking provision is adequate for the proposed development, as the proposed garages would in some cases not be used for car parking as such. It is therefore considered that this would not affect the development's ability in promoting the existing sustainable movement networks, including public transport, walking and cycling.

Site Servicing

4.18 Servicing for the proposed dwellings will typically follow servicing for an average residential unit. This would include refuse servicing, postal service, and the more irregular home delivery and supermarket delivery services. As such, no dedicated parking spaces will be required for these processes.

4.19 **Table 4.3** shows the types of delivery being expected to the site, along with the frequency, typical time and typical vehicle type.

Table 4.3 Types of Delivery

Delivery Type	Frequency	Typical Vehicle Type	Vehicle Length	Typical Delivery Time	Typical Dwell Time
Postal Delivery	Daily (pass-by)	Transit van	5.7m	10:00-16:00	5 minutes
Waste Collection	Two times a week	Refuse Vehicle	12.0m	06:00-07:00 / 20:00-21:00	10-20 mins
General deliveries	Ad hoc	Various from Car to Transit Van	4.4m to 5.7m	08:00-17:30	5-10 minutes
Supermarket deliveries	Weekly	Transit van	5.7m	06:00-23:00	5-10 minutes

4.20 The application site also accords with access for emergency vehicles as stated in *Manual for Streets* and within the *Building Regulations Part B5 (Fire Safety)*. All areas of the site will remain accessible by a fire pump within 45m of a public road or vehicle access.

4.21 In respect of waste collection it is intended that refuse vehicles would make their collections from within the site. The layout complies with minimum walk distances for both residents and refuse collectors as prescribed in relevant transport guidance documents such as *Manual for Streets* and the *MSDC Waste Storage and Collection Guidance for new Developments*.

5. TRAFFIC GENERATION

5.1 This section will outline the existing and proposed trip generation associated with this development and explain how suitable trip rates for the proposed site use have been derived to assess the capacity of the surrounding highway network.

TRICS Methodology

5.2 The TRICS database is a national dataset incorporating a large number of traffic surveys which are used as an estimation model for trip generation, based on evidence of similar developments elsewhere throughout the country. The TRICS database allows the filtering of sites by land use type, location, size and a variety of other parameters to generate a trip generation model by the proposed land use development.

5.3 In this case, the latest iteration of the TRICS model, version 7.4.2, was used in this analysis. The sites were filtered to include sites in England, excluding Greater London and the north of the country. Sites were restricted to sites of less than 200 units in size and located within Neighbourhood Centres only.

Proposed Trip Generation - Dwellings

5.4 To determine the likely number of vehicle trips that could be generated by the proposed site, the TRICS database has been interrogated to obtain trip rates for Class C3 Residential land-use. This has been applied to the proposed 29 houses on site. The trip rates and resultant trips which could be generated by the proposed development are displayed in **Table 5.1** below, with the full TRICS data attached at **Appendix A7**.

Table 5.1 Proposed Trip Rates and Trip Generation for Proposed Dwellings

	Trip Rate / Dwelling			Number of Trips		
	Arrive	Depart	Total	Arrive	Depart	Total
AM Peak (08:00 – 09:00)	0.05	0.383	0.433	1	11	12
PM Peak (17:00 – 18:00)	0.45	0.183	0.633	13	5	18
Daily (7am – 7pm)	2.567	2.616	5.183	74	76	150

Note: Numbers may not equate perfectly due to rounding error.

5.5 The above trip generation assessment demonstrates that the proposed dwellings could generate a total of 12(no.) two-way trips in the AM peak and 18(no.) two-way trips in the PM peak, with 150(no.) vehicular trips expected to arrive and depart to the residential dwellings every day on average. This would equate to a trip every five and three minutes respectively during the AM and PM peak hours.

Proposed Trip Generation – Doctors' Surgery

5.6 To determine the likely number of vehicle trips that could be generated by the proposed site, the TRICS database has again been interrogated to obtain trip rates for Class D1 Non-residential institutions land-use. This is now applied to the proposed doctors' surgery on site. The trip rates and resultant trips which could be generated by the proposed development are displayed in **Table 5.2** below, with the full TRICS data attached at **Appendix A7**.

Table 5.2 Proposed Trip Rates and Trip Generation for Proposed Dwellings

	Trip Rate / 100sqm			Number of Trips		
	Arrive	Depart	Total	Arrive	Depart	Total
AM Peak (08:00 – 09:00)	4.256	2.128	6.384	3	1	4
PM Peak (17:00 – 18:00)	1.957	2.842	4.799	1	2	3
Daily (7am – 7pm)	34.885	34.748	69.633	23	22	45

Note: Numbers may not equate perfectly due to rounding error.

5.7 The above trip generation assessment demonstrates that the proposed dwellings could generate a total of four two-way trips in the AM peak and three two-way trips in the PM peak, with 45(no.) vehicular trips expected to arrive and depart to the surgery every day on average. This would equate to a trip every fifteen and twenty minutes respectively during the AM and PM peak hours.

Proposed Trip Generation for the whole Site

5.8 The proposed trip generation for the proposed dwellings and the doctors' surgery has been therefore combined into one flow within **Table 5.3** below:

Table 5.3 Combined Trip Generation for Proposed Site

	Proposed dwellings			Proposed Surgery			Combined Site		
	Arrive	Depart	Total	Arrive	Depart	Total	Arrive	Depart	Total
AM Peak (08:00 – 09:00)	1	11	12	3	1	4	4	12	16
PM Peak (17:00 – 18:00)	13	5	18	1	2	3	14	7	21
Daily (7am – 7pm)	74	76	150	23	22	45	97	98	195

5.9 The proposed trip generation equates to 16(no.) two-way trips in the AM peak hours and 21(no.) in the PM hour. This is considered as a small change and would make a negligible effect on the local highway network, with an additional trip every three minutes during the evening peak hour. It is therefore not envisaged that the proposed development would make a noticeable effect on the highway network.

Site Access Junction Analysis

5.10 The proposed site access was also reviewed through the industry-standard priority junction review software Junctions 9 module PICADY. PICADY is a TRL software which has been developed over the past three decades to model priority junctions through the TRL/Kimber capacity relationships (also known as the PICADY Model). This considers key geometries such as road widths, visibility, turning space. This model links priority junction geometry to driver behaviour and to predicted capacities, queues and delays.

5.11 Through this model, it has been concluded that the junction will work at the highest levels of movements with minimal delays, as the traffic generated by the site is quite minimal. The report for this analysis is included as **Appendix A8**.

Parking Accumulation

5.12 A parking accumulation table has also been prepared for the proposed Doctors' Surgery, to ensure that the car park does not exceed the allowed parking provision. This is included as **Table 5.4** below:

Table 5.4 Parking Accumulation calculation for the proposed Doctors Surgery

Time	Arrivals	Departures	Parking Accumulation
07:00-08:00	1	0	1
08:00-09:00	3	1	3
09:00-10:00	3	3	3
10:00-11:00	3	3	3
11:00-12:00	3	3	3
12:00-13:00	2	2	3
13:00-14:00	1	1	3
14:00-15:00	2	2	3
15:00-16:00	2	2	3
16:00-17:00	2	2	3
17:00-18:00	1	2	2
18:00-19:00	0	1	1
19:00-20:00	0	0	1

5.13 This shows that the maximum number of visitors to the surgery during the peak hours is of three vehicles, with a parking accumulation of three vehicles as well. This confirms that the provision of six spaces is more than adequate for this site, and would allow for any abnormal peak usage to park within the site.

6. CONCLUSIONS

6.1 Iceni Projects Ltd has been appointed by Reside Developments Ltd to provide transportation advice in regard to their development proposals at the industrial plant at Reeds Lane, in Sayers Common, West Sussex.

6.2 The proposed development comprises the development of a former brickworks site into 29(no.) residential dwellings, ancillary garages and associated vehicle parking, as well as a doctors' surgery.

6.3 The location of the site provides good opportunities to use transport modes other than the single occupancy vehicle, as it benefits from a good level of pedestrian and cycle facilities in the locality, as well as having existing public transport facilities available. An assessment of the local area has also demonstrated that the site is closely located to a range of services / amenities, and also has a good highway safety record.

6.4 Vehicular access to the site will be facilitated by the provision of a bell mouth access at the southern extents of the site on Reeds Lane.

6.5 The proposals include for the provision of 90(no.) car parking spaces, 84(no.) of which are allocated to the residential dwellings and visitors. This is slightly more than the recommended 79(no.) spaces allocated to the dwellings as per WSCC model guidelines. However, it is pertinent to note that this includes 16(no.) garage spaces, which are typically used as storage space, rather than for parking, and the allocated provision is considered acceptable. 58(no.) cycle parking spaces will be located within garages and sheds, as well as an additional 4(no.) cycle spaces on 'Sheffield type' stands in accordance with the relevant standards.

6.6 Given the proposed use, it is not expected that there will be a large number of servicing trips associated with the site. Furthermore, it has been confirmed that the site is accessible to emergency vehicles in accordance with standards.

6.7 A trip generation assessment has been undertaken which demonstrates that the trip generation associated with the proposed development will have a minor impact during peak hours, through the increase of 16 and 21 trips to and from the site in the morning and evening peak hours respectively. This would have a negligible impact on the local highway network.

6.8 In summary, the site is considered to be suitably located for the proposed development. The assessment undertaken within this report demonstrates that the proposals will not have a significant or detrimental impact upon the local transport network.

Job opportunities...

Join the COMPASS TEAM

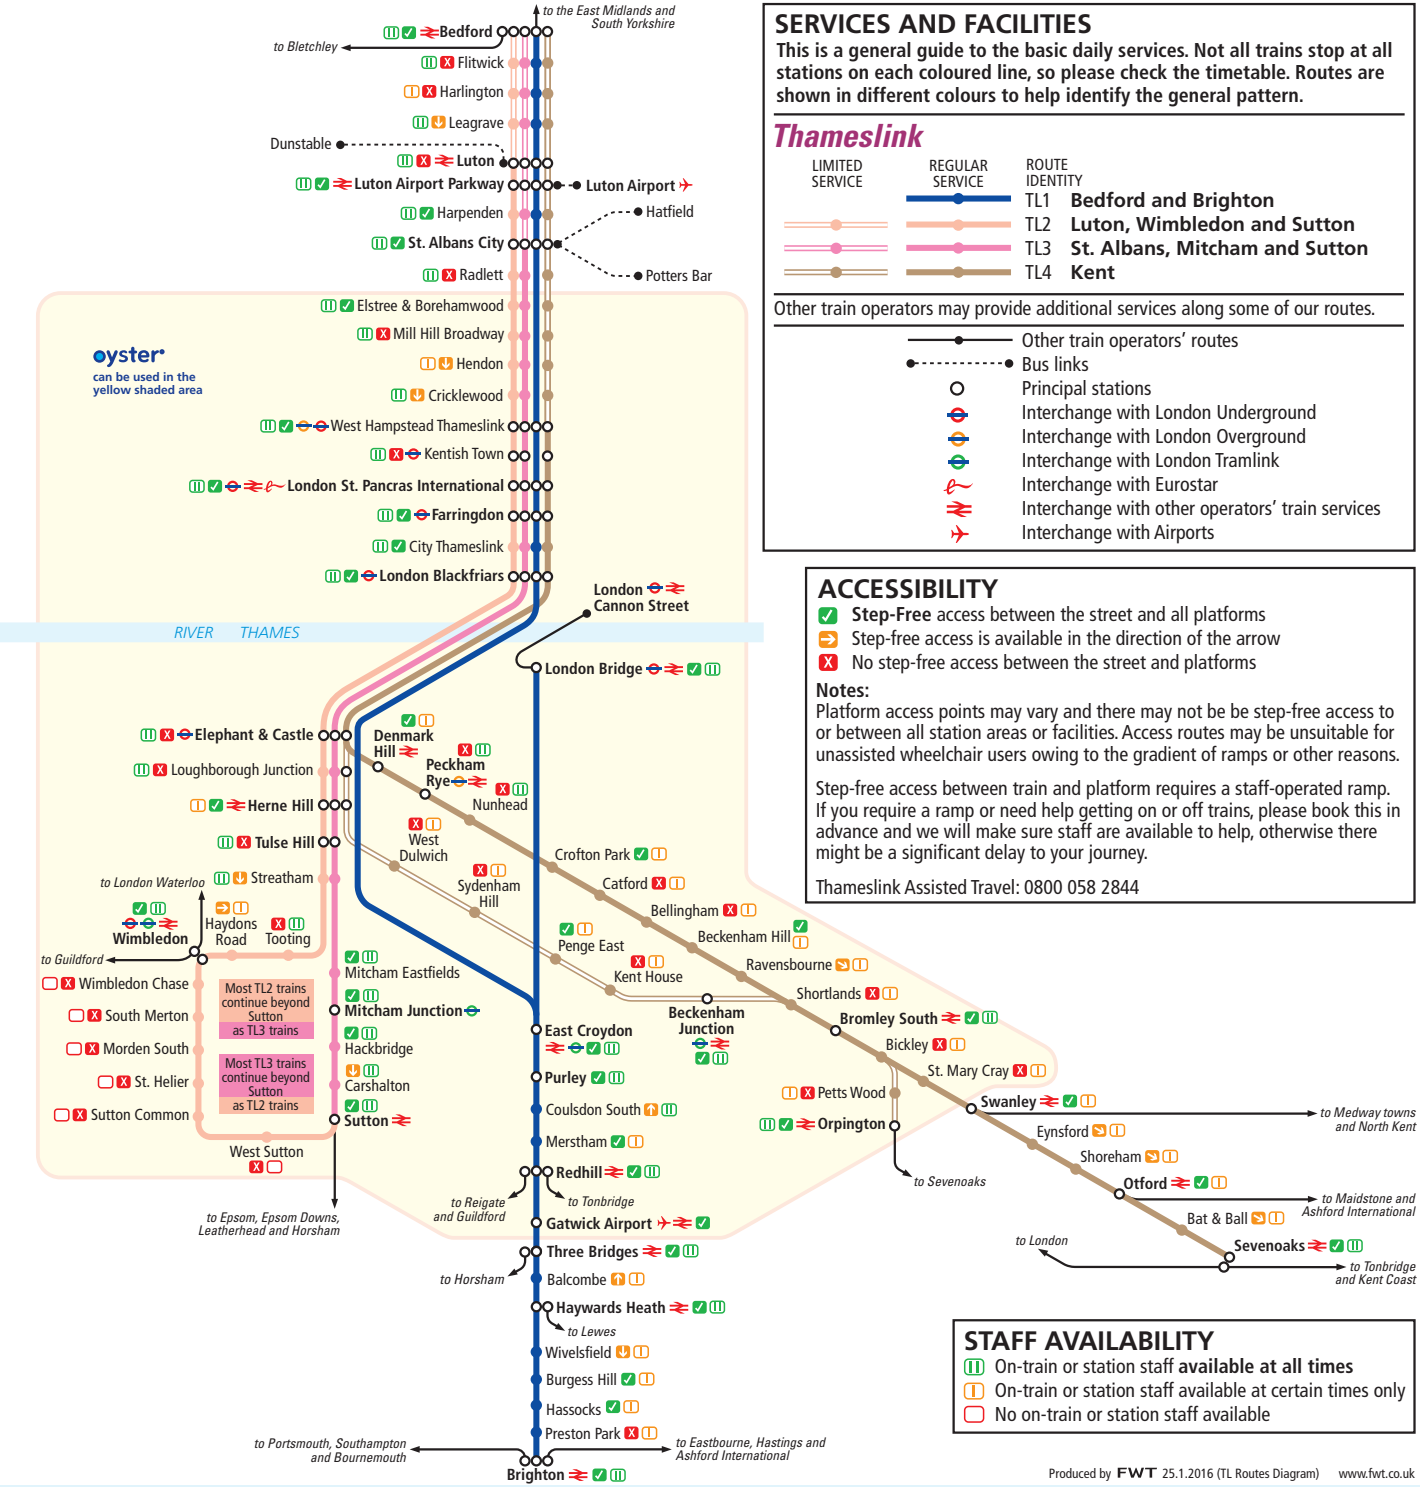
We are a friendly, expanding, independent company looking to recruit well-presented, professional drivers who hold a PCV licence, enjoy dealing with the public and possess a courteous and helpful attitude. We have depots at Worthing, Lewes and Dunsfold (Surrey).

Call Ann or Ananda on:

01903 690025

or if you know anyone who fits the bill and could be interested then please let them know!

A4. TRAIN ROUTE MAPS & TIMETABLES



SERVICES AND FACILITIES

This is a general guide to the basic daily services. Not all trains stop at all stations on each coloured line, so please check the timetable. Routes are shown in different colours to help identify the general pattern.

Thameslink

LIMITED SERVICE	REGULAR SERVICE	ROUTE IDENTITY	
		TL1	**Bedford and Brighton**
		TL2	**Luton, Wimbledon and Sutton**
		TL3	**St. Albans, Mitcham and Sutton**
		TL4	**Kent**

Other train operators may provide additional services along some of our routes.

- Other train operators' routes
- Bus links
- Principal stations
- Interchange with London Underground
- Interchange with London Overground
- Interchange with London Tramlink
- Interchange with Eurostar
- Interchange with other operators' train services
- Interchange with Airports

ACCESSIBILITY

- **Step-Free** access between the street and all platforms
- Step-free access is available in the direction of the arrow
- No step-free access between the street and platforms

Notes:
Platform access points may vary and there may not be be step-free access to or between all station areas or facilities. Access routes may be unsuitable for unassisted wheelchair users owing to the gradient of ramps or other reasons.

Step-free access between train and platform requires a staff-operated ramp. If you require a ramp or need help getting on or off trains, please book this in advance and we will make sure staff are available to help, otherwise there might be a significant delay to your journey.

Thameslink Assisted Travel: 0800 058 2844

STAFF AVAILABILITY

- On-train or station staff **available at all times**
- On-train or station staff available at certain times only
- No on-train or station staff available

Produced by FWT 25.1.2016 (TL Routes Diagram) www.fwt.co.uk

General Information

This timetable shows the service between Three Bridges, Haywards Heath and Burgess Hill to Brighton and London from 21 May to 9 December 2017.

Information correct at time of printing (March 2017). Southern accepts no liability for inaccuracy in the information contained in this timetable.

Notes & Symbols

Bold	Direct train
Light	Connecting train
10	Recommended connecting time
1	First Class accommodation available
⊖	London Underground interchange
🚋	Croydon Tramlink interchange
✈	Airport interchange
→	Continued in later column
←	Continued from earlier column
■	Restricted access. Unsuitable for scooters and large wheelchairs
GX	Service operated by Gatwick Express
SN	Service operated by Southern
TL	Service operated by Thameslink
a	Arrival time
b	Change at East Croydon
c	Change at Three Bridges
d	Departure time
e	Change at Gatwick Airport
f	Departs 1935
s	Stops to set down only
A	From Bedford
B	To Seaford
C	To Ore
D	To Eastbourne
E	To Littlehampton & Hastings. Train divides at Haywards Heath
F	To Brighton & Tonbridge. Train divides at Redhill
G	To Eastbourne & Littlehampton. Train divides at Haywards Heath
H	To Littlehampton & Ore. Train divides at Haywards Heath
J	To Brighton & Hastings. Train divides at Haywards Heath
K	To Littlehampton
L	To Seaford & Ore
M	To Eastbourne & Bognor Regis. Train divides at Haywards Heath
N	To Bognor Regis
P	To Worthing & Hastings. Train divides at Haywards Heath
Q	To Worthing
R	To Eastbourne & Worthing. Train divides at Haywards Heath
S	To Brighton & Portsmouth Harbour. Train divides at Three Bridges
T	To Chichester
U	To Littlehampton & Portsmouth Harbour
V	To Hastings
W	To Bedford
X	From Eastbourne
Y	From Havant
Z	From Brighton
AA	From Hastings
AB	From Littlehampton
AC	From Hastings & Seaford
AD	From Ore
AE	From Bognor Regis
AF	From Portsmouth & Southsea
AG	From Portsmouth Harbour & Littlehampton
FO	Service operates Fridays only
FX	Service operates Mondays to Thursdays only
TS	Service operates Tuesday to Saturday mornings only

Mondays to Fridays

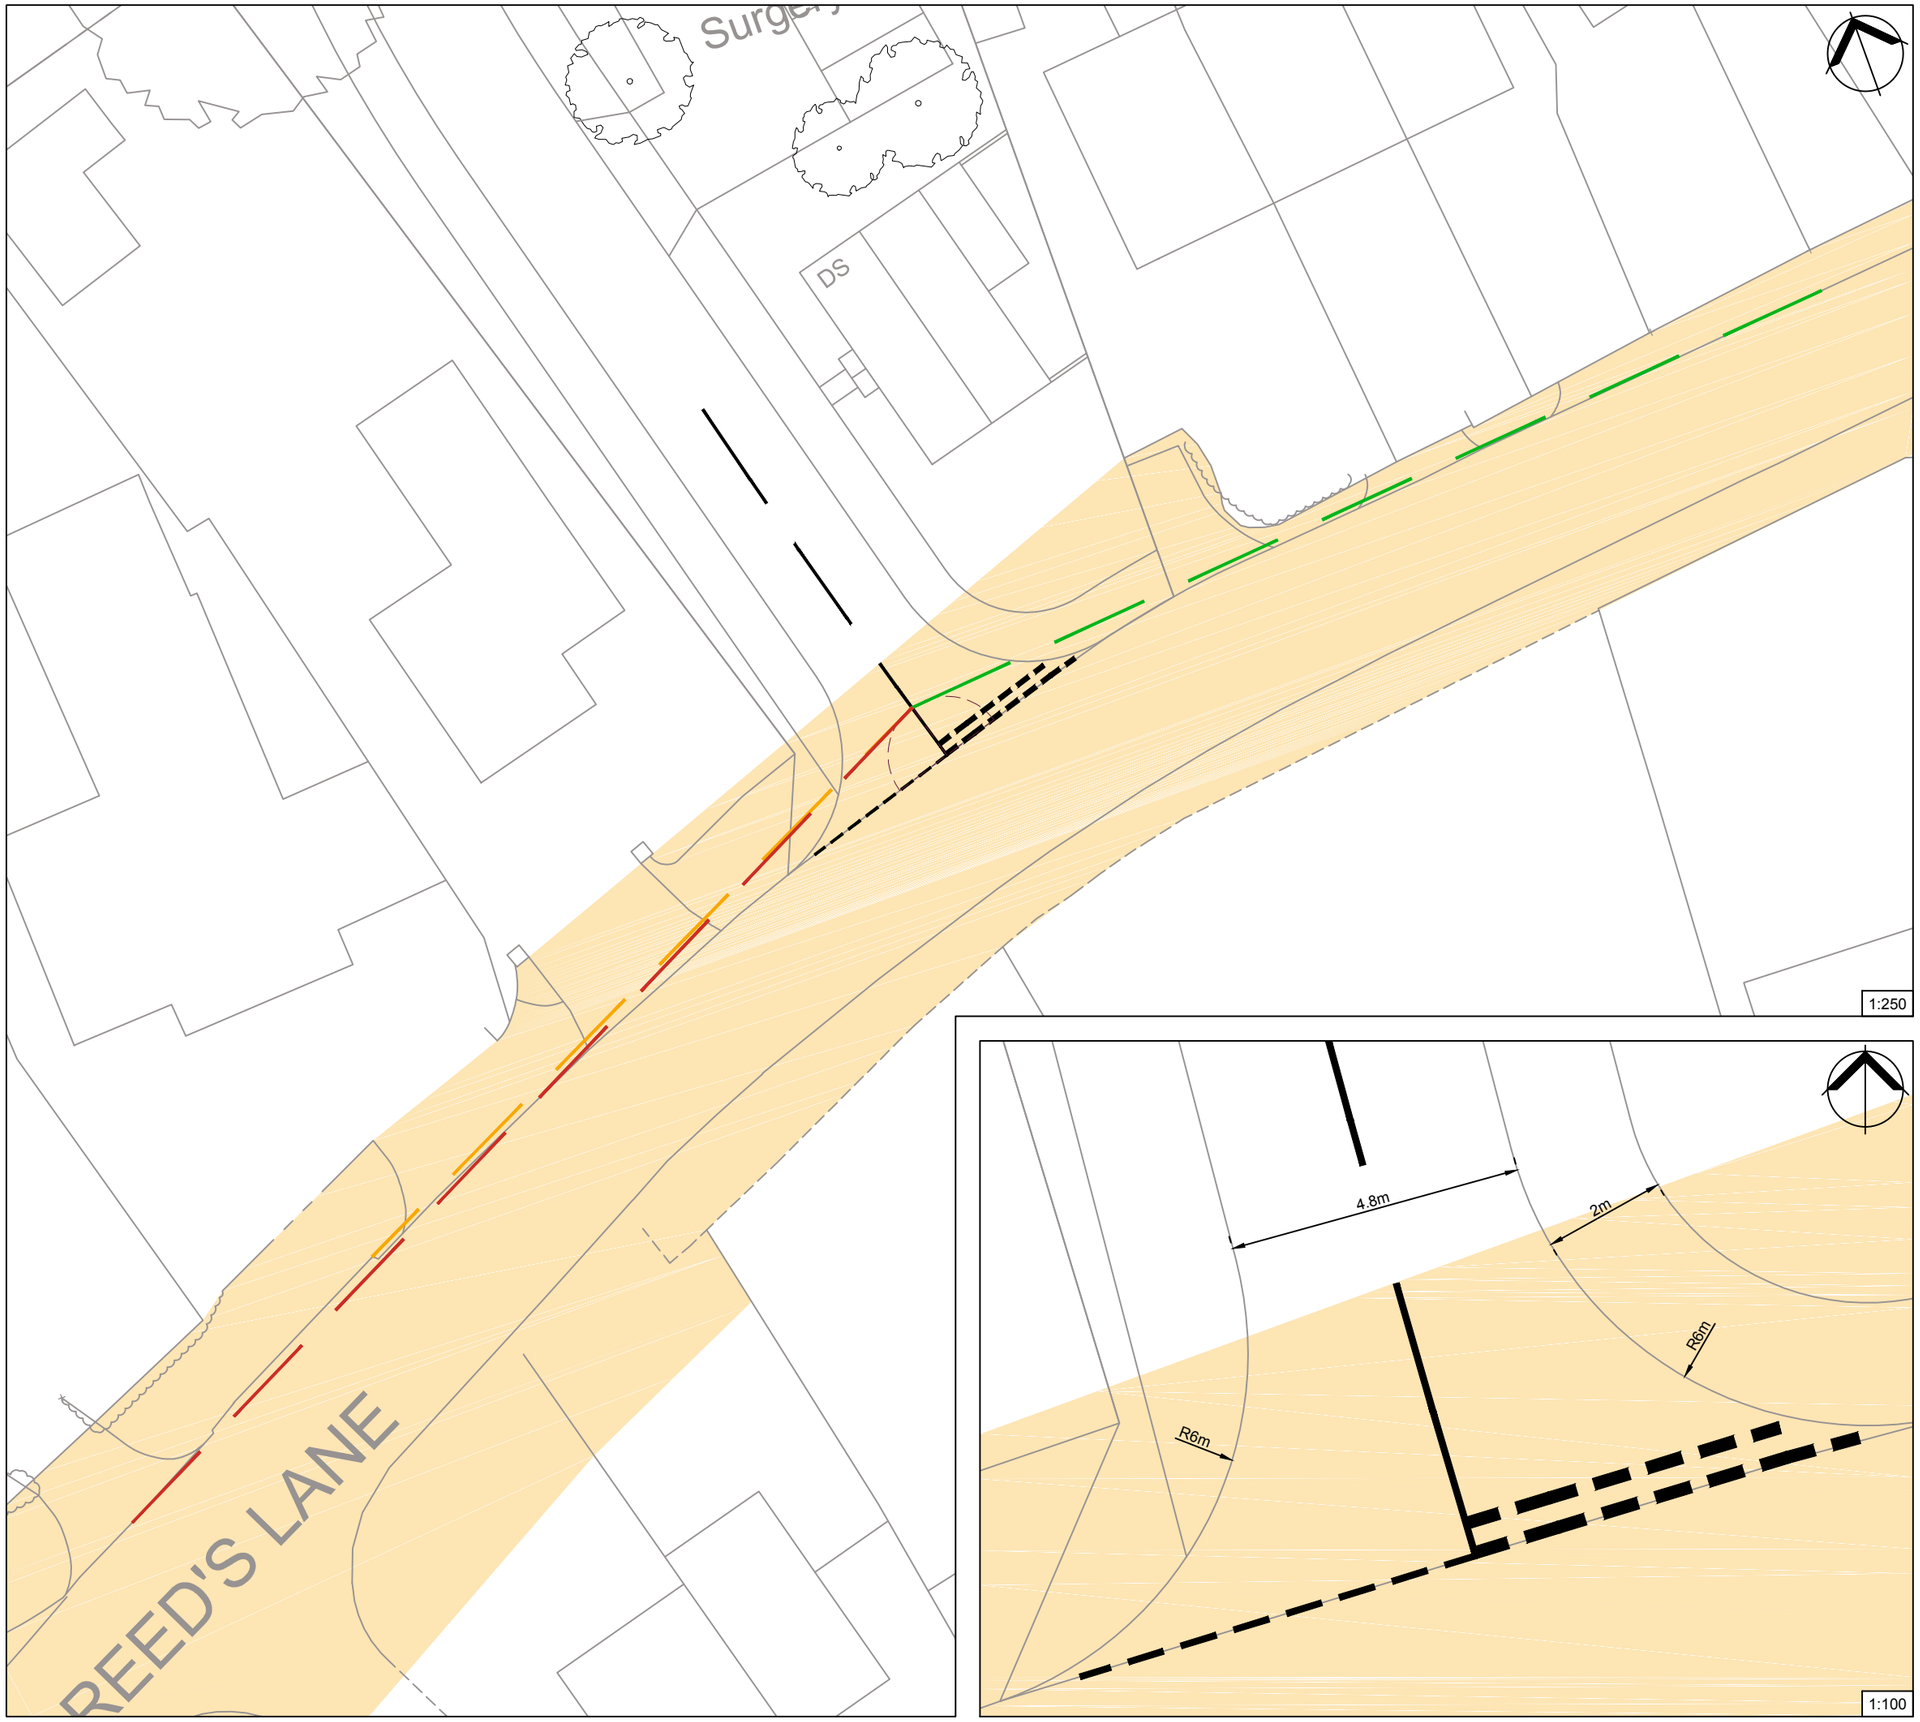
A6. VISIBILITY SPLAYS



Notes;

1.This drawing is based upon drawing number 1636/P/10.02 supplied by CMYK (Planning & design) Ltd and Iceni Projects Ltd. shall not be liable for any inaccuracies or deficiencies.

Notes;

DMRB Calculated Visibility Splay of 2.4m x 46m* looking West
(Based on 85th %ile Speeds of 31.5mph recorded in vicinity of Access**)

DMRB Calculated Visibility Splay of 2.4m x 40.5m* looking East
(Based on 85th %ile Speeds of 28.8mph recorded in vicinity of Access**)

Visibility Splay to Tangential Points

Note:
* Distance inclusive of bonnet length (2.4m)
**Speeds have been adjusted to include wet weather reduction of 2.5mph

Highway Boundary transcribed from 'OS' Base mapping to Topo. Iceni Projects Ltd. are not responsible for it's accuracy and advise that boundary is verified by solicitors.

A7. TRICS TRIP GENERATION REPORT

Calculation Reference: AUDIT-751001-171023-1047

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : M - MIXED PRIVATE/AFFORDABLE HOUSING
MULTI-MODAL VEHICLES

Selected regions and areas:
02 SOUTH EAST
ES EAST SUSSEX 2 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of dwellings
Actual Range: 16 to 44 (units:)
Range Selected by User: 16 to 50 (units:)

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/09 to 17/05/17

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:
Monday 1 days
Wednesday 1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:
Manual count 2 days
Directional ATC Count 0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:
Neighbourhood Centre (PPS6 Local Centre) 2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:
Village 2

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:
C3 2 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Secondary Filtering selection (Cont.):

Population within 1 mile:

1,000 or Less	1 days
1,001 to 5,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

25,001 to 50,000	2 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

1.1 to 1.5	2 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	2 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	2 days

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

1 ES-03-M-02 HOUSES & FLATS EAST SUSSEX
A26 CROWBOROUGH RD
FIVE ASH DOWN VILLAGE
NEAR UCKFIELD
Neighbourhood Centre (PPS6 Local Centre)
Village
Total Number of dwellings: 44
Survey date: MONDAY 27/06/11 Survey Type: MANUAL

2 ES-03-M-09 DETACHED/SEMI-DETACHED EAST SUSSEX
STATION ROAD

NORTHIAM
Neighbourhood Centre (PPS6 Local Centre)
Village
Total Number of dwellings: 16
Survey date: WEDNESDAY 17/05/17 Survey Type: MANUAL

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

TRIP RATE for Land Use 03 - RESIDENTIAL/M - MIXED PRIVATE/AFFORDABLE HOUSING

Total Rates:			2.567	74.433			2.616	75.884			5.183	150.317

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Parameter summary

Trip rate parameter range selected:	16 - 44 (units:)
Survey date date range:	01/01/09 - 17/05/17
Number of weekdays (Monday-Friday):	2
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

23:00 - 24:00												
Total Rates:			0.017	0.483			0.017	0.483			0.034	0.966

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Parameter summary

Trip rate parameter range selected:	16 - 44 (units:)
Survey date date range:	01/01/09 - 17/05/17
Number of weekdays (Monday-Friday):	2
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			0.000	0.000			0.000	0.000			0.000	0.000

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Parameter summary

Trip rate parameter range selected:	16 - 44 (units:)
Survey date date range:	01/01/09 - 17/05/17
Number of weekdays (Monday-Friday):	2
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			4.215	122.285			4.065	117.935			8.280	240.220

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Parameter summary

Trip rate parameter range selected:	16 - 44 (units:)
Survey date date range:	01/01/09 - 17/05/17
Number of weekdays (Monday-Friday):	2
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Calculation Reference: AUDIT-751001-171023-1024

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 05 - HEALTH
Category : G - GP SURGERIES
MULTI-MODAL VEHICLES

Selected regions and areas:

02	SOUTH EAST		
	BU	BUCKINGHAMSHIRE	2 days
03	SOUTH WEST		
	GS	GLOUCESTERSHIRE	1 days
	SM	SOMERSET	1 days
05	EAST MIDLANDS		
	NT	NOTTINGHAMSHIRE	1 days
07	YORKSHIRE & NORTH LINCOLNSHIRE		
	NO	NORTH LINCOLNSHIRE	1 days
	WY	WEST YORKSHIRE	1 days
08	NORTH WEST		
	CH	CHESHIRE	1 days
09	NORTH		
	TW	TYNE & WEAR	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
Actual Range: 350 to 1592 (units: sqm)
Range Selected by User: 200 to 1592 (units: sqm)

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/09 to 28/09/16

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Tuesday	3 days
Wednesday	2 days
Thursday	2 days
Friday	2 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	9 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	6
Edge of Town	3

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	9

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out

Secondary Filtering selection:

Use Class:

D1	9 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

5,001 to 10,000	1 days
10,001 to 15,000	3 days
15,001 to 20,000	2 days
20,001 to 25,000	1 days
25,001 to 50,000	2 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

25,001 to 50,000	1 days
75,001 to 100,000	2 days
100,001 to 125,000	1 days
125,001 to 250,000	2 days
250,001 to 500,000	2 days
500,001 or More	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	1 days
0.6 to 1.0	2 days
1.1 to 1.5	6 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	1 days
No	8 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	9 days

This data displays the number of selected surveys with PTAL Ratings.

22:00 - 23:00									
23:00 - 24:00									
Total Rates:			34.885			34.748			69.633

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Parameter summary

Trip rate parameter range selected:	350 - 1592 (units: sqm)
Survey date date range:	01/01/09 - 28/09/16
Number of weekdays (Monday-Friday):	9
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			0.886			0.886			1.772

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Parameter summary

18:00 - 19:00	9	715	0.171	9	715	0.233	9	715	0.404
19:00 - 20:00	1	620	0.000	1	620	0.000	1	620	0.000
20:00 - 21:00									
21:00 - 22:00									
22:00 - 23:00									
23:00 - 24:00									
Total Rates:			14.448			14.666			29.114

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Parameter summary

Trip rate parameter range selected:	350 - 1592 (units: sqm)
Survey date date range:	01/01/09 - 28/09/16
Number of weekdays (Monday-Friday):	9
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

»2017, PM

Summary of junction performance

	AM				PM			
	Queue (Veh)	Delay (s)	RFC	LOS	Queue (Veh)	Delay (s)	RFC	LOS
	2017							
Stream B-AC	0.0	8.86	0.03	A	0.0	9.07	0.02	A
Stream C-AB	0.0	0.00	0.00	A	0.0	5.48	0.00	A

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	Sayers Common site access
Location	Sayers Common, West Sussex
Site number	17-T135
Date	24/10/2017
Version	v1
Status	(new file)
Identifier	
Client	Reside Developments Ltd
Jobnumber	17-T135
Enumerator	ICENIPROJECTS\jmercieca
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically
D1	2017	AM	ONE HOUR	07:45	09:15	15	✓
D2	2017	PM	ONE HOUR	16:45	18:15	15	✓

Analysis Set Details

ID	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)
A1	✓	100.000	100.000

2017, AM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction Type	Major road direction	Junction Delay (s)	Junction LOS
1	New Site Access	T-Junction	Two-way	0.27	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Reeds Lane (west)		Major
B	Site access		Minor
C	Reeds Lane (east)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	6.00			137.8	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B	One lane	2.51	65	15

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	481	0.088	0.221	0.139	0.316
1	B-C	602	0.092	0.233	-	-
1	C-B	654	0.253	0.253	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.
Streams may be combined, in which case capacity will be adjusted.
Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically
D1	2017	AM	ONE HOUR	07:45	09:15	15	✓

Vehicle mix varies over turn	Vehicle mix varies over entry	Vehicle mix source	PCU Factor for a HV (PCU)
✓	✓	HV Percentages	2.00

Demand overview (Traffic)

Arm	Linked arm	Profile type	Use O-D data	Average Demand (Veh/hr)	Scaling Factor (%)
A		ONE HOUR	✓	135	100.000
B		ONE HOUR	✓	12	100.000
C		ONE HOUR	✓	201	100.000

Origin-Destination Data

Demand (Veh/hr)
