

# BEACON HEIGHTS

Haywards Heath

ECE were appointed by Beacon Heights Developments to develop 24 high quality apartments in the centre of Haywards Heath.

Included in the design are mixtures of 1 and 2 bed homes over 4 storeys. All residential units have generous living spaces and also an area of private external amenity space in the form of a garden, balcony or terrace. The building has employed sustainable technologies including electric car charging points to residents' spaces.

The design and materiality is a direct response to the local context. The building has been carefully layered through a pattern of brickwork framing and panelling with a rhythm of full height windows and inset balconies utilised to perforate the elevation, creating an opportunity to vary materials.

The site offers excellent views across the town to the wider landscape.
