1 Introduction

1.1 INSTRUCTION

Yellow Sub Geo Ltd (Yellow Sub) was instructed by Fairfax Acquisitions Ltd (the Client) to provide a Phase 1 land quality focussed preliminary risk assessment (Desk Study) for Ansty Farm, Haywards Heath (the Site). Instruction to proceed in accordance with Yellow Sub proposal (Ref: P21367_P1) was confirmed by email dated 19th July 2022.

1.2 BRIEF

The brief was to provide a land quality desk study to support the proposed residential development through the Environmental Impact Assessment (EIA) and planning process.

1.3 SCOPE

This report presents records of desk study research, which is in-turn used to develop a conceptual site model and inform a preliminary environmental risk assessment.

The report identifies key potential land quality risks and uncertainties associated with the ground conditions which may require further assessment and/ or risk management in due course via suitable condition(s) linked to the future planning consent.

1.4 LIMITATIONS

This report is written strictly for the benefit of the Client and bound by the conditions presented in Appendix A.

2 Desk Study

The following section collates and presents available information pertinent to the Site and its local environs.

2.1 SITE LOCATION

The Site is located to the east of Ansty Village in the District of Mid Sussex. A Site location plan is presented as drawing P21367_R1_D01. The Site address is as follows:

Ansty Farm,
Haywards Heath,
West Sussex,
RH17 5AG

The National Grid Reference (NGR) for the approximate centre of the Site is TQ 29653 23438. The Site covers a total area of c. 99 ha.

2.2 PROPOSED DEVELOPMENT

The proposed development is currently envisaged to comprise up to 1,450 homes (including 30% affordable housing), up to 90 residential care (C2 units), a primary school, new SEND school, sports facilities including all weather hockey pitches and tennis centre, allotments, retail, community and employment uses together with ancillary and associated development including new and enhanced pedestrian/cycle routes, open spaces, and landscaping. Drawings provided by the Client are included in Appendix B.

2.3 CONSULTATIONS

As part of the desk study, consultation requests were made to West Sussex County Council (WSCC), Mid-Sussex District Council (MSDC) and the Environment Agency (EA). WSCC responded in relation to mineral consultation zones which are covered in more detail in the Preliminary Mineral Assessment for the Site (ref: P21367_R3, April 2023).

2.4 SITE WALKOVER

A Site walkover was undertaken on the 3rd January 2023. Selected photographs are presented in Appendix C. The Site comprised a series of agricultural fields comprising pastoral and grazing land bisected by access tracks and public footpaths. The fields were noted to be saturated with ground conditions very soft in nature. Several areas of ponded water comprising suspected historic quarries/ borrow pits were noted in the northern and southern sections of Site, these were typically overgrown with thick vegetation. Site access was possible for the north of the Site via a gated track off the A272. Southern access was possible off the A272 in Ansty village down a paved farm track.

The Site comprises a series of hill and valley systems with valley areas typically afforested and with watercourses flowing along their base. Further vegetated areas were noted along field boundaries and in the south-east of the Site.

2.5 GEOLOGY

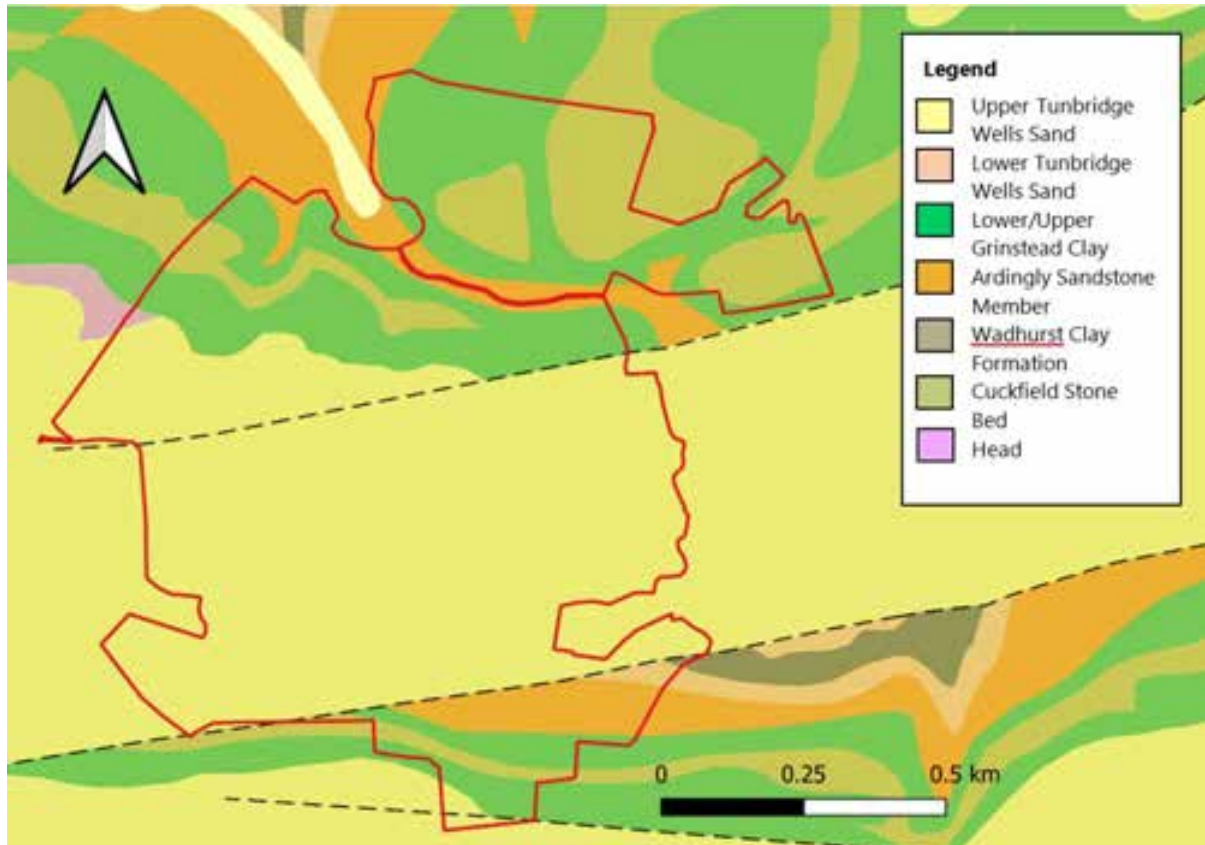

2.5.1 Published Geology

The majority of the Site is underlain by the Upper Tunbridge Wells Sand. The Lower Grinstead Clay, Cuckfield Stone Bed, Upper Grinstead Clay and Ardingly Sandstone Member also outcrop in both the north and south of the Site. In the south of the Site small outcrops of the Lower

Tunbridge Wells Sand and Wadhurst Clay Formation are also present. There is a small outcrop of superficial Head Deposits in the northwest of the Site, otherwise no superficial deposits are mapped. The Site is bisected by three faults, two of which trend NEE-SWW and one NWW-SEE. Figure 2-1 depicts the geology at the Site.

Figure 2-1 Published BGS Geology

2.5.2 Mineral consultation zone

Parts of the Site are located within the WSCC Mineral Safeguarding Area (MSA) for building stone resources, which comprises the Ardingly Sandstone Member and Cuckfield Stone Bed. There is also a MSA associated with the Wadhurst Clay Formation, however only a small area extends onto the Site in the far southeast.

2.5.3 BGS Boreholes

Nearby historical borehole logs within the BGS database are summarised in Table 2-1.

Table 2-1 Strata encountered in nearby historical boreholes logs

Borehole ref.	Strata	Maximum depth (m bgl)
TQ32SW9 (0.1km north)	Topsoil (dark grey-brown, clayey, very sandy silt with occasional gravel, pockets of silty sand and rootlets)	0.5
	Compact, dark orange-brown with light orange-brown patches silty fine SAND with some pockets and layers of weak friable poorly cemented sandstone and occasional pockets and layers of sandy silty CLAY (highly weathered bedrock)	1.3
	Firm to stiff becoming stiff with depth fissured light orange-brown with grey patches silty CLAY with occasional ironstone concretions	3.4
	Very weak to weak blue-grey moderately weathered silty MUDSTONE with some pockets of very stiff silty clay	4.2
	Moderately strong dark grey slightly to moderately weathered highly calcareous MUDSTONE with occasional pockets and layers of silty clay.	4.7
TQ32SE23 (0.1km north)	Dark brown, slightly clayey, very sandy SILT with roots	0.55
	Firm, friable light yellow-brown with light grey patches, slightly sandy, silty CLAY with occasional sandstone gravel and calcareous nodules.	1.7
	Very dense, yellow-brown, silty. fine sand with occasional gravel sized fragments of very weak poorly cemented silty sand and pockets of silty clay (highly weathered bedrock)	2.1
	Very weak poorly cemented yellow brown moderately weathered silty fine SANDSTONE with pockets and layers of very dense silty sand	8
TQ32SW22 (0.3km east)	Yellow Clay	1.8
	Brown Clay	4.6
	Dark shell and clay	14.6

2.6 HYDROGEOLOGY

The Upper and Lower Tunbridge Wells Sand, Ardingly Sandstone Member and Cuckfield Stone Bed beneath the Site are all classified by the EA as Secondary A aquifers. These are layers of rock or drift deposits that have high intergranular and/ or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and/ or river base flow on a strategic scale. The Upper Grinstead Clay and Wadhurst Clay Formation are classed by the EA as unproductive strata. Where superficial Head Deposits are present these are classified as a Secondary (undifferentiated) aquifer. These are aquifers where it is not possible to apply either a Secondary A or B definition because of the variable characteristics of the rock type. They have only a minor value.

Groundwater vulnerability is classed as high.

2.7 HYDROLOGY

2.7.1 Surface water

The Site lies within the catchment of the Rivers Adur and Teville. The Site and surrounding area is covered by a network of small inland rivers. The north of the Site is bisected by a small river flowing between Highbridge Mill Cottages and Mackerells farm cottage. This is associated with several small tributaries, one flowing southwards from the A272 and another from the northeast corner of the Site. The watercourse then flows along the eastern Site boundary where it is joined at Furnace Woods by another tributary, which crosses the south of the Site through Ridden’s Wood.

There are also at least nine small ponds located across the Site with a further nineteen additional ponds within 50m of the Site boundary.

2.7.2 Flooding

EA mapping indicates the majority of the Site is located within Flood Zone 1, at low risk of flooding from rivers or sea. However, a small area in the north of the Site and along the eastern Site boundary, associated with the watercourse, is in Flood Zone 2/3 (extreme flooding from rivers or sea without defences).

2.7.3 Groundwater Flooding

According to the BGS, there is limited potential for groundwater flooding to occur across the Site.

2.8 SITE HISTORY

A review of historical Ordnance Survey (OS) mapping of the Site has been undertaken. The historical mapping is provided in Appendix D. The salient observations are summarised in Table 2-2.

Table 2-2 Site history

Epoch	Details	Development consideration
1874 to 1879 (1:2,500 & 1:10,560)	The Site and surrounding area is predominantly agricultural. On Site is Mackrell’s Farm and Ansty Farm, there are also several small ponds across the Site. Ansty village is located to the west of the Site and Highbridge Mill and mill pond is adjacent to the north eastern boundary of the Site. There are numerous ponds surrounding the Site, the largest being at Cuckfield Park 250m north of Site. There also numerous wells within 100m of the Site. A sand pit is recorded approximately 150m north of the Site, near Highbridge Mill. Areas at Cow Bottom and west of Freizeland Wood, both adjacent to the east of the Site and at the south of the Site near Riddens Farm, also appear to have been worked.	None.
1897 to 1899 (1:2,500 & 1:10,560)	A further small pond is recorded at Ansty Farm. Off Site, a sewage farm with associated tanks is now shown bordering the northeast of the Site. Old sand pits are shown 60m northeast of Site, next to the Sewage Farm and 400m east of the Site along Copyhold Lane. Old quarries are now labelled at Highbridge Mill (50m north of Site), Riddens Farm (at south west boundary of Site) and at Freizeland Wood.	Potential contamination associated with migration from off Site sources including the sewage

Epoch	Details	Development consideration
		treatment works and old sand pits.
1910 to 1913 (1:2,500 & 1:10,560)	No significant changes on Site. The area northeast of the Site is now labelled as a golf course. The sand pit on Copyhold Lane is no longer shown. Addition of an unknown tank 30m west of Site within Ansty village.	None.
1937 to 1938 (1:2,500)	Addition of a footpath across the Site towards Ansty Farm, no other significant changes on Site. Off Site, a series of filter beds are now present at the sewage farm. Ansty village has expanded westwards to include several new buildings. And several new houses have been built along Copyhold Lane to the east of the Site. There is now a cricket ground and pavilion 150m north of the Site.	None.
1938 to 1952 (Aerial photograph & 1:10,560)	No significant changes on Site. Off Site, Ansty continues to expand.	None.
1955 to 1958 (1:2,500 & 1:10,000)	The pond at Mackrell's Farm is no longer shown. Off Site, the golf course is no longer present. There is now a Cricket ground at the west of the Site, north of Ansty. Ansty has expanded further westwards and southwards to include more housing. New housing has also been built southwest of the Site by Marlpit Ponds.	Potential contamination associated with migration from off Site sources including infilled pits/ ponds.
1960 to 1979 (1:1,250 & 1:2,500 & 1:10,000)	Ansty Farm at the centre of Site is now labelled the Old Place and Grain Loft and a pond has been filled in. Off Site, continued expansion of Ansty, including construction of The Lizard, Birch Tree and Whitton Lodge and Ansty Social Club. There is also now a timber yard at Ansty, 300m west of the Site.	Potential for contamination associated with infilled pond.
1984 (1:2,500)	No significant changes on Site. Off Site, addition of an electricity substation 300m east of the Site along Copyhold Lane. Additional filter beds are shown at the sewage treatment works.	None.
1989 (1:2,500)	No significant changes on Site. Construction of the A272 along the northern Site boundary. Addition of new buildings at Lodge Farm and Crabtree Cottage 300m east of the Site	None.
1992 to 1994 (1:1,120, 1:2,500 & 1:10,000)	Construction of a roundabout next to the northwest corner of the Site and widening of the road at High Bridge. Cricket Ground at Ansty is now labelled as a recreation ground. Construction of several new small buildings at Birch Trees Farm at the western edge of the Site, by Ansty.	None.
1999 to 2000 (1:10,000 & Aerial photograph)	Addition of a swimming pool at Old Place in the centre of the Site. Addition of a small building at Mackrell's Farm 40m east of the Site. Expansion of Ansty Farm 400m west of the Site and infilling of pond previously there.	Potential contamination associated with migration from off Site sources including infilled pits/ ponds.

Epoch	Details	Development consideration
2003 to 2016 (1:10,000)	No significant changes on Site. Addition of housing along the southwestern boundary of the Site at Ansty Place and Harvest Hill Cottages	None.
2021 to 2022 (1:10,000 & Aerial photograph)	Old Place and Grain loft at the centre of the Site is now labelled The Barn House. Construction of new housing at Ansty. There is also now a depot in Ansty 350m west of the Site. The Mill Pond at Highbridge Mill appears to have been redeveloped with three small buildings surrounding a possibly smaller pond. Construction of new buildings at Laines Farm 120m north of Site.	None.

2.8.1 Other data sources

Additional online data sources including Google Earth, Britain from Above and National Library of Scotland maps, were reviewed but no additional relevant information was identified.

2.9 ENVIRONMENTAL DATABASE SEARCH

An Envirocheck report was purchased as part of the desk study assessment. The full database report is provided in Appendix D. A summary of the database records is provided in Table 2-3 below with reference to entries within 250m of the Site, unless considered to be relevant at greater distances.

Table 2-3 Environmental database records

Distance (m)/ direction	Land use / permitted activity / authorisation	Development consideration
On Site to 168m (NE, NW, N, W, SE)	28No. Discharge Consents. 10No. Non water company (private) sewage discharges-final/treated effluent and 18No. Discharge consents for waste water treatment works/ sewage treatment works at Newbury Lane, Cuckfield, 2no. which are active currently.	Potential baseline impacts to surface and groundwater quality from the discharge of treated effluent.
On Site to 25m (SE)	1No. local authority recorded landfill is present Site in the northwest corner. However, the details of this are noted to be related to the Cuckfield bypass therefore it is not known if this is on Site or off site along the A272. 1No. landfill site is recorded adjacent to the southern boundary at West Riddens Farm. No further details were provided.	Potential contaminants from unknown Made Ground both on and off Site.
6 to 84 (SE, SW, S, N, NW)	3No. areas of potentially infilled land (non-water) dated 1992-1994	Potential contaminants from unknown Made Ground.
On Site to 202 (E, S, SE, N, NE)	17No. BGS recorded mineral sites. Of these, 5No. are on Site including Laines Farm Pits, Highbridge Mill Pit, Ansty Farm Pit, Hamshalls Pits and Mackrell's Farm Pits. All have ceased operation and are opencast pits in the Ardingly Sandstone Member or Cuckfield Stone Bed.	Potential contaminants from unknown Made Ground if pits are infilled.

Distance (m)/ direction	Land use / permitted activity / authorisation	Development consideration
18 to 158 (NW)	10No. Contemporary trade directory entries, 2 of which are active today, a car dealers and a petrol filling station.	None.

2.10 GEO-HAZARDS

The Envirocheck report provided in Appendix D also includes information from the BGS regarding potential geo-hazards on or near the Site. These potential geo-hazards are summarised in Table 2-4 below.

Table 2-4 Summary of geo-hazards

Ground Stability Hazards	The following potential ground stability hazards have been identified by the BGS on-Site:	
	<i>Collapsible ground</i>	Very Low
	<i>Compressible ground</i>	No Hazard
	<i>Ground dissolution</i>	No Hazard
	<i>Landslide ground</i>	Moderate
	<i>Running sand</i>	Very Low
	<i>Shrinking or swelling clay</i>	Low
Radon	The property is in a lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level). Basic radon protection measures are therefore likely to be required in the construction of new houses.	

2.11 ENVIRONMENTAL DESIGNATIONS

Online mapping (Defra) indicates there are multiple environmental designations nearby to the Site and in the surrounding local area, a summary of these designations is provided in Table 2-5 below.

Table 2-5 Environmental designation within proximity of the Site

Designation	Location	Information
Ancient Woodland	On Site	Biddens Wood, Furnace Wood, Highbridge Mill, Highbridge Mill Shaw, Mackrells Shaw and Pook Ryde Shaw - may be impacted by the proposed development.
Area of Outstanding Natural Beauty (AONB)	8m North	High Weald – may be impacted by the proposed development.
Nitrate Vulnerable Zone (NVZ)	On Site	Adur East (Sakeham) NVZ - not considered to have potential implications on the proposed development.

2.12 PRELIMINARY UXO RISK ASSESSMENT

Zetica produce online mapping relating to potential risks associated with discovering unexploded ordnance (UXO). Based on this mapping, the Site is indicated to be at a Low Risk from all forms of Unexploded Ordnance. Therefore, it is considered that the risk of encountering UXO is unlikely.

3 Preliminary conceptual Site model and risk assessment

The following section draws together the findings of the desk study to develop a preliminary conceptual site model. The relationship of identified sources, viable pathways and identified environmental receptors is considered and used as a technical basis to inform a qualitative assessment of risk to human health and the wider environment posed by the proposed ground conditions and the proposed redevelopment of the Site.

3.1 SOURCES

The key identified potential contaminant sources are summarised as follows and covered within the risk assessment table in Section 3.4.

3.1.1 On-site source potential

- **Current Agricultural Site use:** Potential sources of contamination associated with the current site use include the use of herbicides and pesticides.
- **Infilled quarries:** Potential contamination may be associated with the unknown Made Ground if the former quarries have been infilled.
- **Historical landfill:** Potential contamination, leachate, impacted groundwater and ground gases associated with the possible landfill located in the northwest of the Site.

3.1.2 Off-site source potential

- **Sewage treatment works:** to the north of the Site.
- **Historical landfill/ infilled pits:** Potential contamination, leachate, impacted groundwater and ground gases associated with the landfill located 25m south of the Site.

3.2 PATHWAYS

For the purposes of this risk assessment, it is assumed that the relevant pathways comprise:

- Direct contact with sub-surface materials (dermal soil/ leachate contact, soil ingestion and dust ingestion/ inhalation);
- Leaching of contaminants to groundwater;
- Migration of dissolved phase contamination in groundwater;
- Preferential flow through the drainage system; and,
- Migration of gas and/ or vapours through preferential pathways and/ or permeable sub-surface materials.

3.2.1 Construction-phase pathways

In addition to the above, during the redevelopment of the Site it will be necessary to cause a period of exposure of bare earth. This in turn will allow for increased infiltration during rainfall events, and therefore an increased potential for leaching and throughflow of potential sub-surface contaminants.

3.3 RECEPTORS

The key identified potential environmental receptors are summarised as follows and covered within the risk assessment table in Section 3.4 below.

3.3.1 Human health

- Demolition, construction and maintenance workers (short term acute risks);
- Off-Site residential and commercial occupants; and,
- Future Site occupants (predominantly residential).

3.3.2 Environmental

- Secondary A Aquifers;
- Streams and ponds across and adjacent to the Site ;
- On Site designated Area of Outstanding natural beauty; and,
- On Site areas of Ancient Woodland.

3.4 PRELIMINARY RISK ASSESSMENT

A summary of the potential contaminant linkages associated with the Site is presented in Table 3-1, alongside an assessment of the risks posed by each linkage. The contaminant linkages have been assessed using the risk assessment methodology described in CIRIA C552 (2001). As such, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with any such contamination. The classification system used to define contaminant probability, consequence and risk is described in Appendix E.

Table 3-1 Pollutant linkage assessment

Sources	Pathways	Receptors	Consequence	Probability	Risk	Risk management / remediation
Potential contamination from infilled quarries.	Direct human contact exposure pathways (dermal, ingestion, inhalation)	Future Site users (Residential) Off-Site residential and commercial occupants	Medium	Low likelihood	Moderate /low	Potential sources of contamination on and in the vicinity of the Site are typically discrete including small historical quarries and a sewage treatment works. Therefore, in reality the potential risks to future Site occupants and off Site users is likely to be low . However, a suitable targeted site investigation is required to understand the ground conditions on Site and contamination status of the underlying soils and groundwater, particularly in the areas of infilled ground. If required, this should result in a suitable risk management strategy to ensure that occupants of the proposed development are not impacted.
Historical Landfills Contaminants from Agricultural use (herbicides and pesticides)		Construction workers	Mild	Low likelihood	Low	Risk to construction works can be adequately managed by standard precautions and health and safety procedures commensurate with working on brownfield sites.
Contaminants from off Site sewage treatment works	Ingress into potable supply pipes	Future Site users (Residential) Off-Site residential and commercial occupants	Medium	Low likelihood	Moderate /low	The potential presence of made ground infilling former quarries and historical landfill may include potential organic contaminants which may impact buried potable pipes. Subject to the findings of the above site investigation and location of potable supply pipes delivered as part of the proposed development, barrier pipe may be required should areas of Made Ground be crossed.

Sources	Pathways	Receptors	Consequence	Probability	Risk	Risk management / remediation
	Migration of gases and/or vapours through permeable subsurface materials and/or preferential pathways	Future Site users (Residential) Off-Site residential and commercial occupants	Medium	Low likelihood	Moderate /low	<p>The historic pits and landfill recorded may have been infilled with materials which could act as a potential source of ground gas and vapour. However, these sources are typically small and discrete. Therefore, in reality the potential risks to future Site occupants and off Site users is likely to be low.</p> <p>It is recommended that this should be investigated further as part of the above targeted site investigation and, if required, suitable gas protection measures installed within the proposed dwellings.</p>
	Leaching and/or water mobile constituents passing through permeable sub-surface soils and/or shallow preferential pathways	Secondary (A) Aquifer and Principal Aquifer Streams and ponds across Site	Medium	Low likelihood	Moderate /low	<p>The historic pits and landfill recorded may have been infilled with materials which could act as a potential source of leachate. However, these sources are typically small and discrete. Therefore, in reality the potential risks to the wider environment is likely to be low. In addition, the off-Site sewage works is considered to be the most likely source of local diffuse groundwater pollution.</p> <p>It is recommended that the presence and depth of groundwater at the Site should be investigated further as part of the above targeted site investigation. This should include consideration of off-Site sources including the sewage treatment works.</p>

4 Conclusions and next steps

4.1 CONCLUSIONS

The Site has undergone limited development since the earliest OS maps and has remained agricultural. Small parts of the Site and the surrounding area have historically been subject to the small scale extraction of building stone from the Ardingly Sandstone Member and Cuckfield Stone Bed. There are 6No. recorded historical quarries across the Site, which may have been infilled by unknown materials however, many were noted during the walkover to remain as, possibly partial, depressions. 1No. recorded landfill Site is present in the north-western corner of the Site and a further 1No. located approximately 25m south of the Site, which may be associated with historic quarries. The landfill located on Site is listed as being associated with the Cuckfield bypass (A272) and as such may not actually be located on the Site itself. In addition, the sewage treatment works located adjacent to the northern boundary is likely to be locally impacting surface and ground water quality albeit the discharge will be covered by an Environmental Permit.

Based on this, potential sources of contamination include: potential materials infilling quarries, historical landfill sites, herbicides and pesticides from current agricultural Site use and diffuse pollution from the sewage treatment works.

Based on the findings of the desk study and the proposed residential led development an assessment of land quality has been undertaken in accordance with current guidance and best practice. On this basis, the potential risk to **human health** is considered to be **MODERATE/LOW**.

The potential risk to the **wider environment** is assessed to be **MODERATE/LOW** on the basis that it is underlain by Secondary A Aquifers and surface water features are located across the Site.

Whilst the above risk assessment indicates an overall moderate/ low risk, it is important to note that many of the sources are both historical but also discrete/ isolated with the vast majority of the Site likely to result in a **LOW** potential risk to future Site users and the wider environment.

4.2 NEXT STEPS

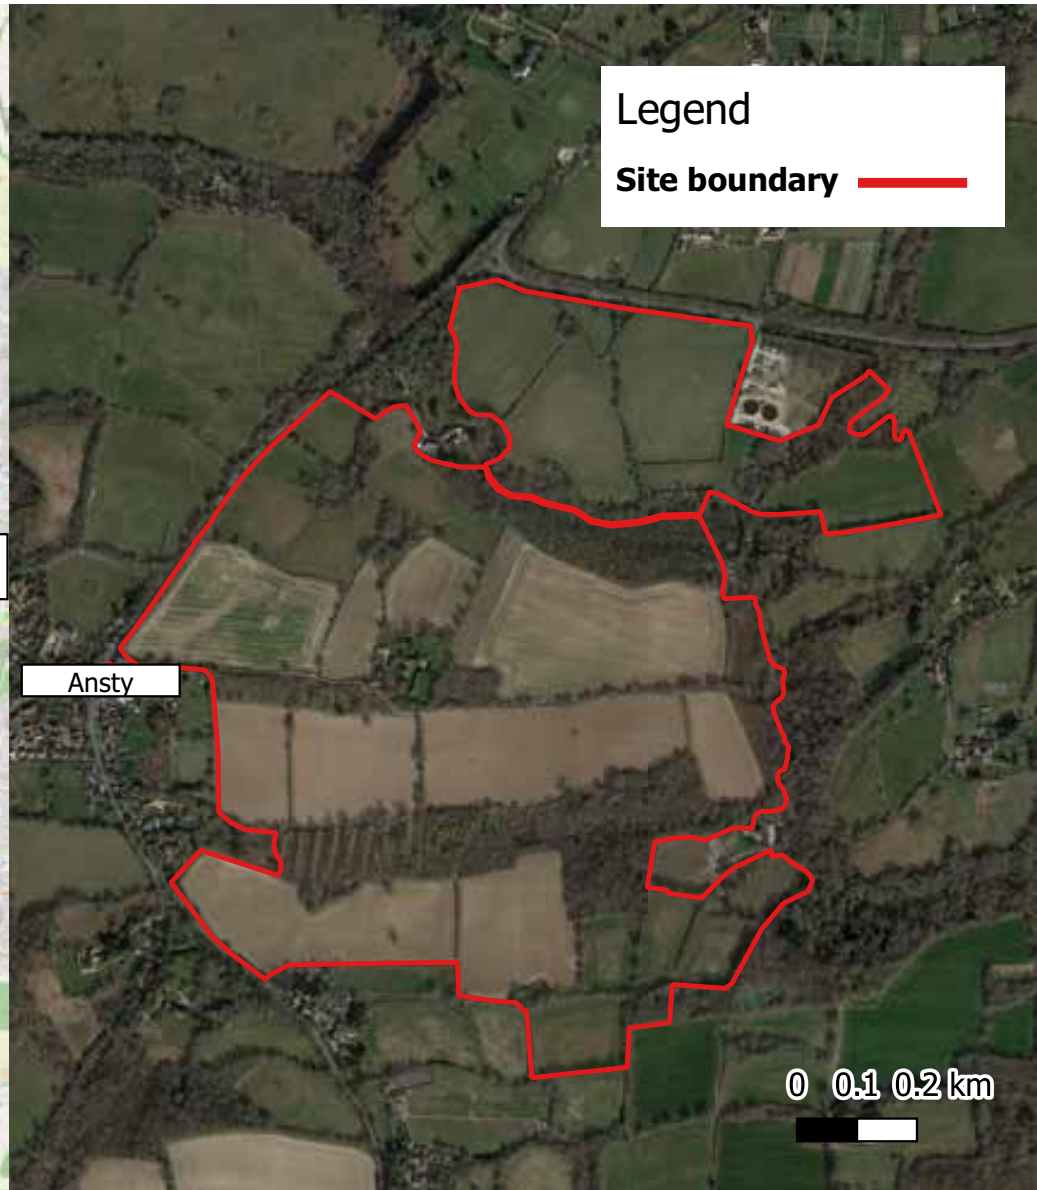

The preliminary conceptual site model and desk based preliminary risk assessment presented herein is considered sufficient to support the proposed planning application. However, following granting of planning permission, a suitably scoped and targeted site investigation should be undertaken to understand the ground, groundwater and ground gas regime across the Site and to test the preliminary conceptual site model. Such an investigation will also provide the opportunity to characterise the ground for the purposes of geotechnical characterisation for foundation design and may also support the design of infiltration drainage.

Given the Site's history, it is important that any site investigation is proportionate and targeted to the features of interest and potential sources of contamination.

Appendix A: Report Conditions

Report Conditions

This report has been prepared by Yellow Sub Geo Ltd. (Yellow Sub Geo) in its professional capacity as soil and groundwater specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract and taking account of the manpower and resources devoted to it by agreement with its client, and is provided by Yellow Sub Geo solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report as a whole, taking account of the terms of reference agreed with the client. The findings are based on the information made available to Yellow Sub Geo at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

Where necessary and appropriate, the report represents and relies on published information from third party, publicly and commercially available sources which is used in good faith of its accuracy and efficacy. Yellow Sub Geo cannot accept responsibility for the work of others.

Site investigation results necessarily rely on tests and observations within exploratory holes only. The inherent variation in ground conditions mean that the results may not be representative of ground conditions between exploratory holes. Yellow Sub Geo take no responsibility for variation in ground conditions between exploratory positions.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, Yellow Sub Geo may, by prior written agreement, agree to such release, provided that it is acknowledged that Yellow Sub Geo accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. Yellow Sub Geo accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual or otherwise, against Yellow Sub Geo except as expressly agreed with Yellow Sub Geo in writing. Yellow Sub Geo reserves the right to withhold and/ or negotiate the transference of reliance on this report, subject to legal and commercial review.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Published 1899

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

Published 1947

Source map scale - 1:10,560

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

10k Raster Mapping

Published 2000

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Published 1875

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1975

Source map scale - 1:2,500

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1994

Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Published 1875

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Published 1874 - 1875

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1975 - 1976

Source map scale - 1:2,500

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Published 1874

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Published 1874

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1975 - 1976

Source map scale - 1:2,500

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Additional SIMs

Published 1984

Source map scale - 1:2,500

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1994

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Appendix E: Ciria C552 Risk Assessment Methodology

Risk classification methodology

The method of risk evaluation adopted in this document is consistent with CIRIA C552 (2001). Hence, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with this contamination.

The classification system used to define contaminant probability, consequence and risk is described in the following tables.

Table A: Classification of probability

Classification	Definition
High Likelihood	There is a contaminant linkage and an event that appears either very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a contaminant linkage and all the elements are present and in the right place, which means that it is probably that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term, and likely over the long term.
Low Likelihood	There is a contaminant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is contaminant linkage but circumstances are such that it is improbable that an event would occur even in the long term.

Table B: Classification of consequence

Classification	Receptor	Definition	Examples
Severe	Humans	Short-term (acute) risk to human health likely to result in "significant harm" as defined in the CTL Statutory Guidance	High concentrations of cyanide on the surface of an informal recreation area
	Controlled waters	Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource	Major spillage of contaminants from site into controlled water
	Property	Catastrophic damage to buildings/property	Explosion, causing building collapse (can also equate to an acute human health risk if buildings are occupied)
	Ecology	A short-term risk to a particular ecosystem, or organism forming part of such eco-system	Potentially long term derogation of a designated site or protected species
Medium	Humans	Chronic damage to human health ("significant harm" as defined in the CTL Statutory Guidance)	Concentrations of a contaminant from a residential site exceed the site-specific assessment criteria
	Controlled waters	Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution)	Leaching of contaminants from a site to a principal or secondary aquifer
	Property	Significant damage to crops, buildings, structures and services	Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability).
	Ecology	A significant change in a particular ecosystem	Death of a species within a designated nature reserve

Classification	Receptor	Definition	Examples
Mild	Humans	Contamination present although unlikely to constitute a significant chronic health risk	Concentrations of a contaminant from a public access site moderately exceed the generic assessment criteria
	Controlled waters	Pollution of non-water resources	Pollution of non-classified groundwater
	Property	Damage to sensitive buildings/structures/services	Aggressive ground conditions leading to potential for long term degradation of buried concrete
	Ecology	Damage to the environment	Localised damage to aquatic habitat causing temporary relocation of certain species
Minor	Humans	Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc.)	The presence of contaminants at such concentrations that protective equipment is required during site works.
	Controlled waters	Potential minor release of contamination to local water features	Short term or low volume release of potentially polluting material to a secondary surface water course of low existing quality
	Property	Easily reparable effects of damage to buildings, structures and services. Harm which may result in a financial loss, or expenditure to resolve.	The loss of plants in a landscaping scheme. Discolouration of concrete
	Ecology	Short term, localised damage may occur; consequences are spatially and temporally limited	Short term or localised disruption to in situ flora or fauna; no lasting effects

Table C: Risk classification (comparison of consequence and probability)

		Consequence (severity)			
		<i>Severe</i>	<i>Medium</i>	<i>Mild</i>	<i>Minor</i>
Probability (likelihood)	<i>High likelihood</i>	Very high risk	High risk	Moderate risk	Low risk
	<i>Likely</i>	High risk	Moderate risk	Moderate/low risk	Low risk
	<i>Low likelihood</i>	Moderate risk	Moderate/low risk	Low risk	Very low risk
	<i>Unlikely</i>	Moderate/low risk	Low risk	Very low risk	Very low risk
